For Your Safety

To prevent damage to your Nikon product or injury to yourself or to others, read the following safety precautions in their entirety before using this equipment. Keep these safety instructions where all those who use the product will read them. The consequences that could result from failure to observe the precautions listed in this section are indicated by the following symbol:

⚠️ This icon marks warnings, information that should be read before using this Nikon product, to prevent possible injury.

WARNINGS

⚠️ Turn off in the Event of Malfunction
Should you notice smoke or an unusual smell coming from the camera or AC adapter, unplug the AC adapter and remove the battery immediately, taking care to avoid burns. Continued operation could result in injury. After removing or disconnecting the power source, take the equipment to a Nikon-authorized service representative for inspection.

⚠️ Do not Disassemble
Touching the internal parts of the camera or AC adapter could result in injury. Repairs should be performed only by qualified technicians. Should the camera or AC adapter break open as the result of a fall or other accident, take the product to a Nikon-authorized service representative for inspection, after unplugging the product and/or removing the battery.

⚠️ Do not use the Camera or AC Adapter in the Presence of Flammable Gas
Do not use electronic equipment in the presence of flammable gas, as this could result in explosion or fire.

⚠️ Handle the Camera Strap with Care
Never place the strap around the neck of an infant or child.

⚠️ Keep out of Reach of Children
Particular care should be taken to prevent infants from putting the battery or other small parts into their mouths.
⚠️ **Observe caution when handling the battery**

The battery may leak or explode if improperly handled. Observe the following precautions when handling the battery for use in this product:

- Before replacing the battery, turn the product off. If you are using the AC adapter, be sure it is unplugged.
- Only use a Rechargeable Li-ion Battery EN-EL5 (supplied). Use the Battery Charger MH-61 (supplied) to charge the battery.
- When inserting the battery, do not attempt to insert it upside down or backwards.
- Do not short or disassemble the battery or attempt to remove or break the battery insulation or casing.
- Do not expose the battery to flames or to excessive heat.
- Do not immerse in or expose to water.
- Replace the terminal cover when transporting the battery. Do not transport or store with metal objects such as necklaces or hairpins.
- The battery is prone to leakage when fully discharged. To avoid damage to the product, be sure to remove the battery when no charge remains.
- Discontinue use immediately should you notice any change in the battery, such as discoloration or deformation.
- If liquid from the damaged battery comes in contact with clothing or skin, rinse immediately with plenty of water.

⚠️ **Observe the following precautions when handling the battery charger**

- Keep dry. Failure to observe this precaution could result in fire or electric shock.
- Dust on or near the metal parts of the plug should be removed with a dry cloth. Continued use could result in fire.
- Do not handle the power cable or go near the battery charger during lightning storms. Failure to observe this precaution could result in electric shock.
- Do not damage, modify, forcibly tug or bend the power cable, place it under heavy objects, or expose it to heat or flames. Should the insulation be damaged and the wires become exposed, take it to a Nikon-authorized service representative for inspection. Failure to observe these precautions could result in fire or electric shock.
For Your Safety

- Do not handle the plug or battery charger with wet hands. Failure to observe this precaution could result in electric shock.

⚠️ Use appropriate cables
When connecting cables to the input and output jacks, use only the cables provided or sold by Nikon for the purpose, to maintain compliance with product regulations.

⚠️ Handle moving parts with care
Be careful that your fingers or other objects are not pinched by the lens cover or other moving parts.

⚠️ CD-ROMs
The CD-ROMs supplied with this device should not be played back on audio CD equipment. Playing CD-ROMs on an audio CD player could cause hearing loss or damage the equipment.

⚠️ Observe caution when using the flash
Using the flash close to your subject’s eyes could cause temporary visual impairment. Particular care should be observed if photographing infants, when the flash should be no less than one meter (39 in.) from the subject.

⚠️ Do not operate the flash with the flash window touching a person or object
Failure to observe this precaution could result in burns or fire.

⚠️ Avoid Contact with Liquid Crystal
Should the monitor break, care should be taken to avoid injury caused by broken glass and to prevent liquid crystal from the monitor touching the skin or entering the eyes or mouth.
Notices

Notice for Customers in the U.S.A.

Federal Communications Commission (FCC) Radio Frequency Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/television technician for help.

CAUTIONS

Modifications

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Nikon Corporation may void the user’s authority to operate the equipment.

Interface Cables

Use the interface cables sold or provided by Nikon for your equipment. Using other interface cables may exceed the limits of Class B Part 15 of the FCC rules.

Notice for customers in the State of California

WARNING: Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. Wash hands after handling.

Nikon Inc.,
1300 Walt Whitman Road, Melville,
New York 11747-3064 USA
Tel: 631-547-4200
Notice for customers in Canada

CAUTION
This Class B digital apparatus complies with Canadian ICES-003.

ATTENTION
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Symbol for Separate Collection in European Countries
This symbol indicates that this product is to be collected separately.

The following apply only to users in European countries:

- This product is designated for separate collection at an appropriate collection point. Do not dispose of as household waste.
- For more information, contact the retailer or the local authorities in charge of waste management.

Thank you for your purchase of a Nikon COOLPIX P5100 digital camera. This manual was written to help you enjoy shooting with your Nikon digital camera. Read this manual thoroughly before use, and keep it where all those who use the product will read it.

**Symbols and Conventions**
To make it easier to find the information you need, the following symbols and conventions are used:

- **This icon marks cautions, information that should be read before use, to prevent damage to the camera.**
- **This icon marks tips, additional information that may be helpful when using the camera.**
- **This icon marks notes, information that should be read before using the camera.**
- **This icon indicates that more information is available elsewhere in this manual or in the Quick Start Guide.**

**Notations**
- A Secure Digital (SD) memory card is referred to as a “memory card.”
- The setting at the time of purchase is referred to as the “default setting.”
- The names of menu items displayed in the camera monitor, and the names of buttons or messages displayed in the computer monitor are indicated with brackets ([ ]).

**Screen Samples**
In this manual, images are sometimes omitted from monitor display samples so that monitor indicators can be more clearly shown.

**Illustrations and Screen Display**
Illustrations and text displays shown in this manual may differ from actual display.

---

**Memory Cards**
Pictures shot with this camera can be stored in the camera’s internal memory or on removable memory cards. If a memory card is inserted, all new pictures will be stored on the memory card and delete, playback and format operations will apply only to the pictures on the memory card. The memory card must be removed before the internal memory can be formatted or used to store, delete or view pictures.
Information and Precautions

Life-Long Learning
As part of Nikon’s “Life-Long Learning” commitment to ongoing product support and education, continually updated information is available online at the following sites:
• For users in the U.S.A.: http://www.nikonusa.com/
• For users in Europe and Africa: http://www.europe-nikon.com/support/
• For users in Asia, Oceania, and the Middle East: http://www.nikon-asia.com/
Visit these sites to keep up-to-date with the latest product information, tips, answers to frequently asked questions (FAQs), and general advice on digital imaging and photography. Additional information may be available from the Nikon representative in your area. See the URL below for contact information:
http://nikonimaging.com/

Use Only Nikon Brand Electronic Accessories
Nikon COOLPIX cameras are designed to the highest standards and include complex electronic circuitry. Only Nikon brand electronic accessories (including battery chargers, batteries, AC adapters, and flash accessories) certified by Nikon specifically for use with this Nikon digital camera are engineered and proven to operate within the operational and safety requirements of this electronic circuitry. THE USE OF NON-NIKON ELECTRONIC ACCESSORIES COULD DAMAGE THE CAMERA AND MAY VOID YOUR NIKON WARRANTY.
For more information about Nikon brand accessories, contact a local authorized Nikon dealer.

Holographic seal: Identifies this device as an authentic Nikon product.

Rechargeable Li-ion Battery EN-EL5

Before Shooting Important Pictures
Before shooting pictures on important occasions (such as at weddings or before taking the camera on a trip), take a test shot to ensure that the camera is functioning normally. Nikon will not be held liable for damages or lost profits that may result from product malfunction.

About the Manuals
• No part of the manuals included with this product may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language in any form, by any means, without Nikon’s prior written permission.
• Nikon reserves the right to change the specifications of the hardware and software described in these manuals at any time and without prior notice.
• Nikon will not be held liable for any damages resulting from the use of this product.
• While every effort was made to ensure that the information in these manuals is accurate and complete, we would appreciate it were you to bring any errors or omissions to the attention of the Nikon representative in your area (address provided separately).
Notice Concerning Prohibition of Copying or Reproduction

Note that simply being in possession of material that was digitally copied or reproduced by means of a scanner, digital camera or other device may be punishable by law.

- **Items prohibited by law from being copied or reproduced**
  Do not copy or reproduce paper money, coins, securities, government bonds or local government bonds, even if such copies or reproductions are stamped “Sample.” The copying or reproduction of paper money, coins, or securities which are circulated in a foreign country is prohibited. Unless the prior permission of the government was obtained, the copying or reproduction of unused postage stamps or post cards issued by the government is prohibited. The copying or reproduction of stamps issued by the government and of certified documents stipulated by law is prohibited.

- **Cautions on certain copies and reproductions**
  The government has issued cautions on copies or reproductions of securities issued by private companies (shares, bills, checks, gift certificates, etc.), commuter passes or coupon tickets, except when a minimum of necessary copies are to be provided for business use by a company. Also, do not copy or reproduce passports issued by the government, licenses issued by public agencies and private groups, ID cards and tickets, such as passes and meal coupons.

- **Comply with copyright notices**
  The copying or reproduction of copyrighted creative works such as books, music, paintings, woodcut prints, maps, drawings, movies and photographs is governed by national and international copyright laws. Do not use this product for the purpose of making illegal copies or to infringe copyright laws.

Disposing of Data Storage Devices

Please note that deleting images or formatting data storage devices such as memory cards or built-in camera memory does not completely erase the original image data. Deleted files can sometimes be recovered from discarded storage devices using commercially available software, potentially resulting in the malicious use of personal image data. Ensuring the privacy of such data is the user’s responsibility.

Before discarding a data storage device or transferring ownership to another person, erase all data using commercial deletion software, or format the device and then completely refill it with images containing no private information (for example, pictures of empty sky). Be sure to also replace any pictures selected for the welcome screen (§ 122). Care should be taken to avoid injury or damage to property when physically destroying data storage devices.

15. Image size .................................................. 92
16. Small picture indicator ................................... 57
17. Protect icon ................................................ 118
18. Print-order icon ........................................... 87
19. Movie indicator* ........................................... 70

* Differs according to the selected movie option.
The Mode Dial

Align the mode icon with the mark next to the mode dial.

**Auto** (22): Choose this simple “point-and-shoot” mode, suited to first-time users of digital cameras, in which the camera automatically adjusts settings.

**Anti-shake** (43): Prevent or reduce blur using vibration reduction (128) and the Best Shot Selector (BSS) (101).

**High sensitivity** (44): Choose this mode to reduce blur when the subject is poorly lit.

**P,S,A,M** (45): Choose these modes for greater control over shutter speed and aperture.

**SETUP Setup** (89): Display the setup menu, where you can perform such tasks as setting the camera clock and adjusting monitor brightness.

**Movie** (64): Choose this mode to shoot movies.

**Scene** (35): Choose this mode for automatic adjustment of settings to suit the selected subject type, or use the voice recording option to record sound only.
The Command Dial and **Fn** (FUNC) Button

Rotate the command dial, and use the dial with **Fn**, to select mode or menu quickly and change settings.

Basic Operations

The Multi Selector
This section describes standard uses of the multi selector to select modes, select menu options and to apply selection.

With Shooting

- Display \(\mathcal{F}\) (flash mode) (\(\mathcal{G}\) 30) menu or move cursor up
- Display \(\mathcal{O}\) (self-timer) (\(\mathcal{G}\) 32) menu
- Display \(\mathcal{H}\) (focus mode) (\(\mathcal{G}\) 33) menu or move cursor down
- Apply selection

With Playback

- Choose the previous picture
- Choose the next picture

With Menu Screens

- Move cursor up
- Display sub-menu or move apply selection right
- Return to the previous menu
- Move cursor down
- Apply selection

Notes on the Multi Selector
In the manual, the button indicating up, down, left and right of the multi selector is shown as ▲, ▼, ◀, and ▶.
The **MENU** Button

Press **MENU** to display the menu for the selected mode. Use the multi selector to navigate the menus (10). Menu options can also be selected by rotating the command dial.

![Diagram of menu options]

**Help Displays**

Rotate the zoom control to **T** ( ) when [?] is displayed at the lower right of the menu screen to view a description of the currently selected menu option. To return to the original menu, rotate the zoom control to **T** ( ) again.
Basic Operations

The [ ] Button

To hide or show monitor indicators during shooting and playback, press [ ].

With Shooting

Current settings

Monitor off (P, S, A, and M modes only). Shooting is available only when camera is in focus (AF lamp is lit).

Framing guides (L, ISO, P, S, A, and M modes only)

View through lens only

With Playback

Photo information displayed

Shooting data displayed (see below)

Photo information hidden

Shooting data: Shows the folder name, file name, exposure mode, shutter speed, aperture, exposure compensation, ISO sensitivity, and histogram for the current picture. Shooting data are not displayed if the current picture is a movie.

- Exposure mode: P, S, A, or M (45). P is also displayed on pictures shot in (auto), (anti-shake), (high sensitivity), and SCENE (scene) modes.
- Histogram: A graph showing tone distribution. The horizontal axis corresponds to pixel brightness, with dark tones to the left and bright tones to the right; the vertical axis shows number of pixels of each brightness in image.
Attaching the Camera Strap
Attach both ends of the camera strap to the eyelet as shown below.
Charging the Battery

Charge the supplied Rechargeable Li-ion Battery EN-EL5 with the supplied Battery Charger MH-61 before first use or when the battery is running low.

1  Plug the charger in
Connect the power cable to the charger ① and then plug it into an electrical outlet ②. The CHARGE lamp will light ③.

2  Charge the battery
Remove the battery terminal cover and insert the battery as shown, matching the projections on the battery to the indentations in the charger.

The CHARGE lamp will blink ① as the battery recharges. Charging is complete when the CHARGE lamp stops blinking ②.
A fully-exhausted battery will charge in about two hours.
When the charging is complete, remove the battery and unplug the power cable from the electrical outlet.

**The Battery Charger**
- The supplied Battery Charger MH-61 is for use only with the Rechargeable Li-ion Battery EN-EL5.
- Be sure to read and follow the warnings and cautions on pages iii to iv of this manual, before using the battery charger.
**Inserting the Battery**

Insert a Rechargeable Li-ion Battery EN-EL5 (supplied) into the camera. Charge the battery before first use or when the battery is running low (14).

1. **Open the battery-chamber/memory card slot cover.**

2. **Insert the battery.**
   
   Confirm that the positive (+) and negative (−) terminals are oriented correctly, as described on the label at the entrance of the battery chamber, and insert the battery.
   
   Use the side of the battery to push the orange battery latch up ① as the battery is inserted ②. The latch drops back into place when the battery is fully inserted.

3. **Close the battery-chamber/memory card slot cover.**

**Inserting the Battery**

Inserting the battery upside down or backwards could damage the camera. Be sure to check the battery is in the correct orientation.
Removing the Battery

Turn the camera off and confirm that the power-on lamp is off before removing the battery. To eject the battery, open the battery-chamber/memory card slot cover and slide the battery latch in the direction shown ①. The battery can then be removed by hand ②.

- Note that the battery may become hot during use; observe due caution when removing the battery.

Turning On and Off the Camera

To turn on the camera, press the power switch. The power-on lamp (green) will light and the monitor will turn on. To turn off the camera, press the power switch again.

If the camera is turned off, hold down ③ to turn the camera on in playback mode (④ 28).

Notes on the Battery

- Only the Rechargeable Li-ion Battery EN-EL5 can be used. **Do not, under any circumstances, attempt to use another type of battery.**
- Be sure to read and follow the warnings for the battery on page iii and the section “Caring for the Camera” (⑤ 141), before using the battery.

AC Adapter

The AC Adapter EH-62A (available separately from Nikon) can be used to power the COOLPIX P5100 from an electrical outlet. Do not, under any circumstances, use another make or model of AC adapter. Failure to observe this precaution could result in overheating or in damage to the camera.
Setting Display Language, Date and Time

A language-selection dialog is displayed the first time the camera is turned on.

1. **Press the power switch to turn on the camera.**
   The power-on lamp will light and the monitor will turn on.

2. **Use the multi selector to choose the desired language and press OK.**
   For information on using the multi selector, see “The Multi Selector” (10).

3. **Choose [Yes] and press OK.**
   If [No] is selected, the date and time will not be set.

4. **Press OK.**

**Daylight Saving Time**

If daylight saving time is in effect, turn on [Daylight saving] in the time zone menu and set the date.

1. Before pressing OK, press the multi selector ▼ to choose [Daylight saving].
2. Press OK to enable daylight saving time (✓). Pressing OK toggles the daylight saving time option on and off.
3. Press the multi selector ▲, and then press OK to proceed to step 5.

When daylight saving time ends, turn [Daylight saving] off from the date menu (123) in the setup menu. The camera’s clock is automatically set back one hour.
5 Select your home time zone (125) and press OK.

6 Edit the date.
   - Press the multi selector ▲ or ▼, to edit the highlighted item.
   - Press the multi selector ◄ to highlight the day ([D]), month ([M]), year ([Y]), time, minute, and date display order. Press the multi selector ► to highlight items in reverse order (order may differ in some regions).

7 Choose the order in which the day, month and year are displayed and press OK or the multi selector ►.

The settings are applied and monitor display exits to shooting mode.

Editing the Date and Time
To edit the date and time, select [Date] from the [Date] menu (123) in the setup menu (120) and follow the procedure described in step 6.
Inserting Memory Cards

Pictures are stored in the camera’s internal memory (approx. 52 MB) or on removable Secure Digital (SD) memory cards (available separately) (137).

If a memory card is inserted in the camera, pictures are automatically stored on the memory card and pictures recorded to the memory card can be played back, deleted or transferred. Remove the memory card to store pictures in the internal memory, or play back, delete or transfer pictures from the internal memory.

1 Turn the camera off and open the battery-chamber/memory card slot cover.

If the power-on lamp is lit, press the power switch to turn off the camera.

Make sure that the camera is off (power-on lamp is off) before inserting or removing the memory card.

2 Insert the memory card.

Slide the memory card in correctly until it clicks into place.

Close the battery-chamber/memory card slot cover.

✔ Inserting Memory Cards

Inserting the memory card upside down or backwards could damage the camera or the memory card. Make sure that the memory card is correctly oriented.
Inserting Memory Cards

Removing Memory Cards
Before removing memory cards, **turn the camera off** and confirm that the power-on lamp is off. Open the battery-chamber/memory card slot cover and press the card in ① to partially eject the card ②. The card can then be removed by hand.

**Formatting Memory Cards**
If the message at right is displayed, the memory card must be formatted before use (p. 131). Note that **formatting permanently deletes all pictures** and other data on the memory card. Be sure to make copies of any pictures you wish to keep before formatting the memory card.

Use the multi selector to choose [Yes] and press . The confirmation dialog will be displayed. To start formatting, choose [Format] and press .

- **Do not turn the camera off or open the battery-chamber/memory card slot cover until formatting is complete.**
- The first time you insert the memory cards used in other devices into the COOLPIX P5100, be sure to format them (p. 131) with this camera.

**The Write Protect Switch**
SD memory cards are equipped with a write protect switch. Pictures cannot be recorded or deleted and the memory card cannot be formatted when this switch is in the “lock” position. Unlock by sliding the switch to the “write” position.

**Memory Cards**
- Use only Secure Digital memory cards.
- **Do not perform the following during formatting, while data is being written to or deleted from the memory card, or during data transfer to a computer. Failure to observe this precaution could result in the loss of data or in damage to the camera or memory card:**
  - Eject the memory card
  - Remove the battery
  - Turn off the camera
  - Disconnect the AC adapter
- **Do not disassemble or modify.**
- **Do not drop, bend, or expose to water or strong physical shocks.**
- **Do not touch the metal terminals with your fingers or metal objects.**
- **Do not affix labels or stickers to the memory card.**
- **Do not leave in direct sunlight, closed vehicles or areas exposed to high temperatures.**
- **Do not expose to humidity, dust, or to corrosive gases.**
Step 1 Turn the Camera On and Select 📷 (Auto) Mode

This section describes how to shoot in 📷 (auto) mode, an automatic, “point-and-shoot” mode recommended for first-time users of digital cameras.

1. Rotate the mode dial to 📷.

2. Press the power switch to turn on the camera.
   The power-on lamp will light, the monitor will turn on, and the lens will extend.

3. Check the battery level and number of exposures remaining.

   **Battery Level**
<table>
<thead>
<tr>
<th>Monitor</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO INDICATOR</td>
<td>Battery fully charged.</td>
</tr>
<tr>
<td>🍃</td>
<td>Battery low; prepare to charge or replace the battery.</td>
</tr>
<tr>
<td>🚨 Warning! 🍃 Battery exhausted.</td>
<td>Cannot shoot pictures. Recharge or replace with a fully-charged battery.</td>
</tr>
</tbody>
</table>

   **Number of Exposures Remaining**
   The number of pictures that can be stored depends on the capacity of the memory or memory card, image quality, and image size.
Step 1 Turn the Camera On and Select (Auto) Mode

Indicators Displayed in (Auto) Mode

- **Shooting mode** displayed in (auto) mode.
- Internal memory indicator
  Pictures will be recorded to internal memory. When memory card is inserted, [IN] is not displayed and pictures will be recorded to memory card.
- **Image quality/Image size**
  Current image quality and size settings are displayed. The default settings are [ Norm ] (Normal) for image quality and [ G ] (4,000 × 3,000) for image size.
- Vibration reduction icon
  Vibration reduction can be applied to reduce the effects of camera shake.
  - Aperture ([ 45 ])
  - Shutter speed ([ 45 ])

Available Functions in (Auto) Mode

In (auto) mode, focus mode ([ 33 ]) and exposure compensation ([ 34 ]) can be applied and the camera can shoot using the flash mode ([ 30 ]) and self-timer ([ 32 ]). Pressing **MENU** displays the shooting menu options for specifying the image quality ([ 91 ]) and image size ([ 92 ]).

Vibration Reduction

[Vibration reduction] ([ 128 ]), when [On] (default setting) is selected, can be applied to effectively reduce blur, caused by slight hand movement known as camera shake, that commonly occurs when shooting with zoom applied or at slow shutter speeds. Vibration reduction can be used in all shooting modes.

Auto Power-Off in (Auto) Mode (Standby Mode)

The monitor will dim to reduce the drain on the battery if no operations are performed for about five seconds. The monitor will brighten when camera controls are used. At default settings, the monitor will turn off altogether if no operations are performed for about a minute during shooting and playback. The camera will turn off automatically if no operations are performed for another three minutes ([ 130 ]).
Step 2 Frame a Picture

1 Ready the camera.

Hold the camera steadily in both hands, keeping your fingers and other objects away from the lens, built-in flash and self-timer lamp.

When shooting in “tall” (portrait) orientation, hold the camera so that the built-in flash is up.

2 Frame the picture.

Position the main subject near the center of the monitor.

Using the Viewfinder

Use the viewfinder to frame pictures when bright light makes it difficult to see the display in the monitor.

The Viewfinder

As the area visible in the viewfinder may differ from that of the final picture, use the monitor to frame pictures in the following situations:

- When shooting at ranges of about 1 m (3 ft. 3 in.) or less
- When a converter lens is used (available separately from Nikon; 110, 138)
- When digital zoom is applied (25, 129)
- When shooting at an image size of (3,984 × 2,656), (3,968 × 2,232), or (2,992 × 2,992)
Using the Zoom

Use the zoom control to activate optical zoom. Rotate the zoom control to **W (_whitespace) to zoom out**, increasing the area visible in the frame, or **T (_whitespace) to zoom in** so that the subject fills a larger area of the frame.

![Zoom out Zoom in]

When the camera is zoomed in to the maximum magnification (3.5x), rotating and holding the zoom control at **T (_whitespace) triggers digital zoom**. The subject is magnified up to 4x, for a total magnification of 14x.

When digital zoom is in effect, the camera will focus on the subject in the center focus area.

A monitor indicator shows the current zoom ratio.

![Zoom indicator]

**Digital Zoom and Image Quality**

If possible, digital zoom will create a picture by cropping the area visible in the monitor to the current image size (92), increasing magnification without affecting quality.

If the crop would be smaller than the current image size, additional pixels are added through a process known as interpolation, creating a slightly “grainy” image.

The amount of zoom available before interpolation is used depends on the option currently selected for image size, as shown in the following table. The camera pauses temporarily in its zooming operation when it reaches the maximum zoom ratio possible before interpolation is used. **V** is displayed when interpolation is in effect.

### Maximum zoom ratio without interpolation

<table>
<thead>
<tr>
<th>Image size</th>
<th>Zoom ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>F, I, G, H</td>
<td>3.5x (up to the maximum optical zoom ratio)</td>
</tr>
<tr>
<td>E</td>
<td>4.2x (digital zoom up to 1.2x)</td>
</tr>
<tr>
<td>D</td>
<td>4.9x (digital zoom up to 1.4x)</td>
</tr>
<tr>
<td>C</td>
<td>6.3x (digital zoom up to 1.8x)</td>
</tr>
</tbody>
</table>

Digital zoom can be limited to the range at which interpolation is not in effect, or it can be turned off (129).
Step 3 Focus and Shoot

1 Press the shutter-release button halfway.

The camera automatically focuses on the subject in the center focus area.

When the subject is in focus, the focus area will glow green, and the green AF lamp next to the viewfinder will light.

When the camera is unable to focus, the focus area blinks red, and the AF lamp will flicker. Change the composition and try again.

When digital zoom is in effect, the focus area will not be displayed and the camera will focus on the subject in the center focus area.

2 Press the shutter-release button the rest of the way down.

The picture will be recorded to the memory card or internal memory.

Shutter-release Button

The camera features a two-stage shutter-release button. To set focus and exposure, press the shutter-release button halfway, stopping when you feel resistance. Focus and exposure lock while the shutter-release button is held in this position. To release the shutter and shoot, press the shutter-release button the rest of the way down.

Do not use force when pressing the shutter-release button, as this may result in camera shake and blurred pictures.
During Recording

While pictures are being recorded, the (wait) icon will be displayed, the (memory) or (when a memory card is inserted in the camera) icon blinks, and the AF lamp blinks. Do not turn the camera off, open the battery-chamber/memory card slot cover, or remove or disconnect the power source while these icons are displayed. Cutting power or removing the memory card in these circumstances could result in loss of data or in damage to the camera or card.

Autofocus

Autofocus may not perform as expected in the following situations. In some rare cases, the subject may not be in focus despite the fact that the active focus area and the AF lamp glow green:

- Subject is very dark
- Objects of sharply differing brightness are included in the scene (e.g. the sun is behind the subject and is in deep shadow)
- No contrast between the subject and surroundings (e.g. when the subject is standing in front of a white wall, wearing a white shirt)
- Several objects are at different distances from the camera (e.g. the subject is inside a cage)
- Subject is moving rapidly

In the situations noted above, try pressing the shutter-release button halfway to refocus several times, or focus on another subject and use focus lock. When using focus lock, be sure that the distance between the camera and the subject with which focus was locked is the same as that for the actual subject.

Focus Lock

To focus on an off-center subject when [Center] is selected for [AF area mode], use focus lock as described blow.

- Be sure that the distance between the camera and the subject does not change while focus is locked.
- When the shutter-release button is pressed halfway, exposure is locked.

AF-assist Illuminator and Flash

If the subject is poorly lit, the AF-assist illuminator may light by pressing the shutter-release button halfway, or the flash may fire by pressing the shutter-release button all the way down. The illuminator has a range of about 1.9 m (6.2 ft.) at the maximum wide-angle position and about 1.1 m (3.6 ft.) at the maximum telescopic position. The AF-assist illuminator can be set to [Off] manually (129), although in this case the camera may not focus when lighting is poor.
Step 4 Viewing and Deleting Pictures

Viewing Pictures (Playback Mode)

Press \( \text{播放} \). The last picture shot will be displayed in full-frame playback mode.

Press the multi selector \( \uparrow, \downarrow, \leftarrow, \) or \( \rightarrow \) to view additional pictures. Hold down the multi selector \( \uparrow, \downarrow, \leftarrow, \) or \( \rightarrow \) to fast forward pictures.

Pictures may be displayed briefly at low resolution while being read from the memory card or internal memory.

Press \( \text{播放} \) or the shutter-release button to switch to shooting mode.

When \( \text{播放} \) is displayed, pictures stored in the internal memory will be displayed. When memory card is inserted, \( \text{播放} \) is not displayed and pictures stored on the memory card will be displayed.

Deleting Pictures

1. Press \( \text{垃圾桶} \) to delete the picture currently displayed in the monitor.

2. Use the multi selector to select [Yes] and press \( \text{确定} \).

To exit without deleting the picture, choose [No] and press \( \text{确定} \).
# Playback Mode

The following options are available in full-frame playback mode.

<table>
<thead>
<tr>
<th>Option</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Playback zoom</td>
<td><img src="Q" alt="T" /></td>
<td>Press T (Q) to enlarge view of picture currently displayed in monitor, up to about 10x. Press <img src="X" alt="X" /> to return to full-frame playback mode.</td>
</tr>
<tr>
<td>View thumbnails</td>
<td><img src="H" alt="W" /></td>
<td>Press W (H) to display four-, nine- or 16- picture thumbnails.</td>
</tr>
<tr>
<td>Display thumbnail wheel</td>
<td><img src="C" alt="C" /></td>
<td>Rotate the command dial to display the thumbnail wheel.</td>
</tr>
<tr>
<td>Hide or show photo info</td>
<td><img src="E" alt="E" /></td>
<td>Hide or show photo info in monitor.</td>
</tr>
<tr>
<td>Record/play voice memo</td>
<td><img src="Z" alt="Z" /></td>
<td>Press <img src="X" alt="X" /> to record or play back voice memos up to 20 seconds in length.</td>
</tr>
<tr>
<td>Switch to shooting mode</td>
<td><img src="F" alt="F" /></td>
<td>Press <img src="F" alt="F" /> or the shutter-release button to switch to the mode selected with the mode dial.</td>
</tr>
</tbody>
</table>

## Pressing ![F](F) to Turn On the Camera

When the camera is off, holding down ![F](F) will turn the camera on in playback mode. The lens does not extend.

## Viewing Pictures

Pictures stored in the internal memory can only be viewed if no memory card is inserted.

## Deleting the Last Picture Shot

In shooting mode, press ![F](F) to delete the last picture shot.
Using the Flash

The flash has a range of about 0.3-8 m (1-26 ft. 2.9 in.) when the camera is zoomed out all the way. With maximum optical zoom applied, the range is about 0.3-4 m (1-13 ft. 1.5 in.) (when [ISO sensitivity] is set to [Auto]). The following flash modes are available.

<table>
<thead>
<tr>
<th>Flash Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO</td>
<td>Auto (default setting for (auto) mode) Flash fires automatically when lighting is poor.</td>
</tr>
<tr>
<td></td>
<td>Auto with red-eye reduction Reduces “red-eye” in portraits (31).</td>
</tr>
<tr>
<td></td>
<td>Off         Flash will not fire even when lighting is poor.</td>
</tr>
<tr>
<td></td>
<td>Fill flash  Flash fires when a picture is shot. Use to “fill-in” (illuminate) shadows and backlit subjects.</td>
</tr>
<tr>
<td></td>
<td>Slow sync   AUTO (auto) is combined with slow shutter speed. Flash illuminates main subject; slow shutter speeds are used to capture background at night or under dim light.</td>
</tr>
<tr>
<td></td>
<td>Rear-curtain sync Flash fires just before shutter closes, creating effect of a stream of light behind moving subjects.</td>
</tr>
</tbody>
</table>

Setting the Flash Mode

1. Press (flash mode). The flash menu is displayed.

2. Use the multi selector to choose the desired flash mode and press OK. The icon for the selected flash mode is displayed at the top of the monitor.

When AUTO (auto) is applied, AUTO is only displayed for five seconds.

If a setting is not applied by pressing OK within a few seconds, the selection will be cancelled.
Using the Flash

✅ Shooting When Lighting Is Poor and the Flash Is Disabled (🕒)

- Use of a tripod is recommended to stabilize the camera during shooting and avoid the effects of camera shake. Turn vibration reduction (ês 128) off when using a tripod.
- Place the camera on a flat, level surface or use a tripod (recommended).
- The 🛡 symbol is displayed when the camera automatically increases sensitivity to minimize blur caused by slow shutter speed. Pictures shot when 🛡 is displayed may be slightly mottled.

✅ Note on Using the Flash

When using the flash at a wide-angle zoom position, reflections from dust particles in the air may appear as bright spots in pictures. To reduce these reflections, set the flash to ❌ (Off) or zoom in on the subject.

📝 The Flash Lamp

The flash lamp indicates flash status when the shutter-release button is pressed halfway.

- **On**: Flash will fire when picture is shot.
- **Blinks**: Flash charging. Wait a few seconds and try again.
- **Off**: Flash will not fire when picture is shot.

When pictures are shot using the flash and a low battery, the monitor display will turn off and the flash lamp will blink until the flash is fully charged.

📝 The Flash Mode Setting

In 📷 (auto), high-sensitivity shooting, P, S, A, and M modes, the default setting is AUTO (auto). When any flash mode other than AUTO (auto with red-eye reduction) is applied in 📷 (auto) mode, the setting is only enabled until the camera is turned off. Turning the camera off returns flash mode to AUTO (auto). When flash mode is applied in a scene mode, the setting is only enabled until another shooting mode is selected or the camera is turned off.

📝 Red-eye Reduction

This camera uses advanced red-eye reduction (“In-Camera Red-Eye Fix”). The flash fires repeatedly at low intensity before the main flash, reducing red-eye. The camera then analyzes the picture; if red-eye is detected, the affected area will be processed to further reduce red-eye before the picture is saved. Note that because there is a slight lag between the shutter-release button being pressed and the picture being shot, this mode is not recommended when a quick shutter response is required. The time before the next picture can be shot also increases slightly. Advanced red-eye reduction may not produce the desired results in all situations. In extremely rare instances, areas not subject to red-eye may be affected by advanced red-eye reduction processing; in these cases, choose another mode and try again.

🔍 More Information

See “Using Optional Speedlights” 📷 139 for more information.
Shooting with the Self-timer

The camera is equipped with a ten-second and three-second timer for self-portraits. When using the self-timer, use of a tripod is recommended. Turn vibration reduction (A 128) off when using a tripod.

1. Press (self-timer).
   The self-timer menu is displayed.

2. Use the multi selector to choose [10s] or [3s] and press OK.
   [10s] (ten seconds): Suited for important occasions (such as weddings)
   [3s] (three seconds): Suited for preventing camera shake
   The mode selected for self-timer is displayed.
   If a setting is not applied by pressing OK within a few seconds, the selection will be cancelled.

3. Frame the picture and press the shutter-release button halfway.
   Focus and exposure will be set.

4. Press the shutter-release button the rest of the way down.
   The self-timer starts and the self-timer lamp will blink. The lamp stops blinking one second before the photograph is shot and remains lit until the shutter is released.
   The number of seconds remaining before the shutter is released is displayed in the monitor.
   When the shutter is released, the self-timer turns off.
   To stop the timer before a picture is shot, press the shutter-release button again.
Choosing a Focus Mode

Choose a focus mode according to the subject and composition.

**RF**  **Autofocus**
Camera automatically adjusts focus according to distance to subject. Use when the distance from subject to lens is 30 cm (1 ft.) or more, or 70 cm (2 ft. 4 in.) or more when camera is zoomed all the way out.

**Infinity**
Use when shooting distant scenes through foreground objects such as windows or when shooting landscapes at ranges of 5 m (16 ft. 5 in.) or more. Flash turns off automatically.

**Macro close-up**
Use for close-ups. If zoomed in or out until icon in display turns green, camera can focus on objects as close as 4 cm (1.6 in.) to lens. Camera focuses continuously until shutter-release button is pressed halfway.

**Setting the Focus Mode**

1. Press **RF** (focus mode).
   The focus menu is displayed.

2. Use the multi selector to choose the desired focus mode and press **OK**.
   The icon for the selected focus mode is displayed at the top of the monitor.
   When **RF** (autofocus) is applied, **RF** is only displayed for five seconds.
   If a setting is not applied by pressing **OK** within a few seconds, the selection will be cancelled.

**Macro Close-up Mode**
In macro close-up mode, the camera focuses continuously, even when the shutter-release button is not pressed halfway to lock focus. However, in **P, S, A, and M** modes, the setting of [Auto-focus mode] (107) will be applied.

**The Focus Mode Setting**
In **(auto)**, anti-shake, high-sensitivity shooting, **P, S, A, and M** modes, the default setting is **RF** (autofocus). The focus mode applied in **(auto)** mode will be restored to its default setting when another shooting mode is selected or the camera is turned off. The focus mode applied in scene mode will be restored to its default setting when another shooting mode is selected or the camera is turned off.
Exposure Compensation

Exposure compensation is used to alter exposure from the value suggested by the camera to make pictures brighter or darker.

1. Press \( \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \) (exposure compensation).
   - The exposure compensation value will be displayed.
   - Exposure compensation is not available in mode M (manual).

2. Press the multi selector \( \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \) or \( \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \) to adjust exposure.
   - The exposure compensation menu is displayed.
   - When the picture is too dark, adjust the exposure compensation in the positive (+) direction.
   - When the picture is too bright, adjust the exposure compensation in the negative (–) direction.
   - Exposure compensation can be set to values between –2.0 and +2.0 EV in increments of 1/3 EV.

3. Press the shutter-release button to shoot.
   - Repeat steps 2 and 3 to shoot while adjusting the exposure compensation value a little at a time.

4. Press OK.
   - When an exposure compensation value other than [0.0] is applied, the value is displayed with the \( \text{ } \text{ } \text{ } \text{ } \text{ } \text{ } \) icon in the monitor.
   - To cancel exposure compensation, select [0.0] before pressing OK, or follow steps 1 and 2 to select [0.0].

Exposure Compensation Value

When exposure compensation is adjusted in (auto) mode, a scene mode, or anti-shake mode, the setting is only enabled until another shooting mode is selected or the camera is turned off. Switching to another shooting mode or turning the camera off cancels exposure compensation and returns to [0.0].

Using Exposure Compensation

The camera tends to lower exposure when the frame is dominated by brightly lit objects and to increase exposure when the frame is mostly dark. Positive compensation may therefore be required to capture the brilliancy of very bright objects that fill the frame (for example, sunlit expanses of water, sand, or snow) or when the background is much brighter than the main subject. Negative compensation may be called for when large areas of the frame contain very dark objects (for example, a swath of dark green leaves) or when the background is much darker than the main subject.
Shooting Suited for the Scene

Shooting in the Scene Mode

Camera settings are automatically optimized for the selected subject type. The following scene modes are available.

The voice recording option can also be selected to record sound only.

* See "Voice Recordings" (87).

### Setting the Scene Mode

1. Rotate the mode dial to **SCENE**.

2. Press **MENU** to display the scene menu screen, choose the desired scene with the multi selector and press **OK**.

3. Frame the subject and shoot.

#### Using the Command Dial to Select a Scene

A scene can also be selected by holding down **Fn** and rotating the command dial.

#### Image Quality and Image Size

[Image quality] (88) and [Image size] (89) can be set in the scene menu. Changes made to these settings apply to all shooting modes.
Shooting in the Scene Mode

Features

📷 Portrait

Use this mode for portraits in which the main subject stands out clearly. Portrait subjects exhibit smooth, natural-looking skin tones.
- The camera detects and focuses on a face looking toward the camera (Shooting with Face-Priority → 106).
- If the camera detects multiple faces, the camera focuses on the face closest to the camera.
- If no face is recognized, the camera will focus on the subject in the center focus area.
- Digital zoom is not available.

* Other settings can be selected.

🔍 | 🕵️* | ⏳ | Off* | 🌵 | AF | 📷 | 0.0* | ☀️ | Auto*

*Landscape*

Use this mode for vivid landscapes and cityscapes.
- Camera focuses at infinity. The AF lamp (26) always glows green when the shutter-release button is pressed halfway. Note, however, that objects in the foreground may not always be in focus.

* Other settings can be selected.

🔍 | 🕵️* | ⏳ | Off* | 🌵 | M | 📷 | 0.0* | ☀️ | Off

Icons Used for Descriptions

The following icons are used for descriptions in this section: 🌵, flash mode (30); ☀️, self-timer (32); 🌵, focus mode (33); 📷, exposure compensation (34); ☀️, AF-assist illumination (129).

Scene Mode Settings

Adjustments to the flash mode setting, self-timer setting, focus mode setting, and exposure compensation value applied in any scene mode are cancelled and these settings return to their default values whenever another shooting mode is selected or the camera is turned off.
**Sports**

Use this mode for dynamic action shots that freeze the action in a single shot and record motion in a series of pictures.
- While the shutter-release button is pressed halfway, the camera focuses continuously until focus is acquired and locked.
- While the shutter-release button is held down, the camera shoots at a rate of about 1.0 frames per second (fps) when image quality is set to Normal and image size is set to \( (4,000 \times 3,000) \). This rate is maintained for up to 5 pictures.
- Focus, exposure compensation, and white balance are fixed at values determined with the first shot in each series.
- The maximum frame rate with continuous shooting may vary depending upon the current image mode setting and the memory card used.
- Camera focuses on subject in center of frame.

* Other settings can be selected.

**Night portrait**

Use this mode to achieve a natural balance between the main subject and background lighting in portraits shot at night.
- The camera detects and focuses on a face looking toward the camera (Shooting with Face-Priority → 106).
- If the camera detects multiple faces, the camera focuses on the face closest to the camera.
- If no face is recognized, the camera will focus on the subject in the center focus area.
- Digital zoom is not available.

1 Fill flash with slow sync and red-eye reduction.
2 Other settings can be selected.

**Party/indoor**

Captures the effects of candlelight and other indoor background lighting.
- Camera focuses on subject in center of frame.
- As pictures are easily affected by camera shake, check the [Vibration reduction] (128) setting and hold the camera steadily.

1 Fill flash with slow sync and red-eye reduction. Other settings can be selected.
2 Other settings can be selected.
Shooting in the Scene Mode

**Beach/snow**
Captures the brightness of such subjects as snowfields, beaches, or sunlit expanses of water.
- Camera focuses on subject in center of frame.

|  |  |  |  |  |  |  |  |
|---|---|---|---|---|---|---|
|  |  | Off* |  | AF |  | Auto* |

* Other settings can be selected.

**Sunset**
Preserves the deep hues seen in sunsets and sunrises.
- Camera focuses on subject in center of frame.

|  |  |  |  |  |  |  |  |
|---|---|---|---|---|---|---|
|  |  | Off* |  | AUTO* |  |  |

* Other settings can be selected.

**Dusk/dawn**
Preserves the colors seen in the weak natural light before sunrise or after sunset.
- Camera focuses at infinity. When the shutter-release button is pressed halfway, the AF lamp (26) always lights. Note, however, focus may not be set for near subjects, while the camera focuses at infinity.

|  |  |  |  |  |  |  |  |
|---|---|---|---|---|---|---|
|  |  | Off* |  | Off |  |  |

* Other settings can be selected.

**A**: For those scene modes with **A**, use of a tripod is recommended. Turn vibration reduction (128) off when using a tripod.

**NR**: Pictures shot in scene modes utilizing **NR** may be processed to reduce noise and therefore take longer to record.
Shooting in the Scene Mode

Night landscape

Slow shutter speeds are used to produce stunning night landscapes.
- Camera focuses at infinity. When the shutter-release button is pressed halfway, the AF lamp (26) always lights. Note, however, focus may not be set for near subjects, while the camera focuses at infinity.

| ⚡  | ⌚  | ⏳  | Off* | 🌸  | 🌿  | 🕵️  | 0.0* | 📷  | Off |

* Other settings can be selected.

Close up

Photograph flowers, insects and other small objects at close range.
- (macro close-up) is selected for focus mode (33) and the camera automatically zooms to the position at the closest distance at which the camera can focus.
- The camera can focus at distances as close as 4 cm (1.6 in.) at the wide-angle zoom position at which 🌸 glows green.
- The closest distance at which the camera can focus varies depending upon zoom position.
- [AF area mode] is set to [Manual] (105). When 🌸 is pressed, camera focuses on subject in active focus area.
- While the shutter-release button is pressed halfway, the camera focuses continuously until focus is acquired and locked.
- As pictures are easily affected by camera shake, check the [Vibration reduction] (128) setting and hold the camera steadily.

| ⚡  | AUTO* | ⏳  | Off* | 🌸  | 🌿  | 🕵️  | 0.0* | 📷  | Auto* |

* Other settings can be selected. Note that the flash may be unable to light entire subject at distances of less than 30 cm (11.8 in.)

Museum

Use indoors where flash photography is prohibited (for example, in museums and art galleries) or in other settings in which you do not want to use the flash.
- Camera focuses on subject in center of frame.
- [BSS] (Best Shot Selector) (101) is used when shooting.
- As pictures are easily affected by camera shake, check the [Vibration reduction] (128) setting and hold the camera steadily.

| ⚡  | 🌿  | ⏳  | Off¹ | 🌸  | AF² | 🕵️  | 0.0¹ | 📷  | Off |

¹ Other settings can be selected.
² Also (macro close-up) can be selected.

- For those scene modes with ✨, use of a tripod is recommended. Turn vibration reduction (128) off when using a tripod.
- Pictures shot in scene modes utilizing NR may be processed to reduce noise and therefore take longer to record.
Shooting in the Scene Mode

Fireworks show

Slow shutter speeds are used to capture the expanding burst of light from a firework.
- Camera focuses at infinity. When the shutter-release button is pressed halfway, the AF lamp (26) always lights. Note, however, focus may not be set for near subjects, while the camera focuses at infinity.

Copy

Provides clear pictures of text or drawings on a white board or in print.
- Camera focuses on subject in center of frame.
- Use (macro close-up) mode (33) in focus mode with this mode to focus at short ranges.
- Colored text and drawings may not show up well.

Backlight

Use when light is coming from behind your subject, throwing features or details into shadow. The flash fires automatically to “fill in” (illuminate) shadows.
- Camera focuses on subject in center of frame.

Miscellaneous

Other settings can be selected.
Also (macro close-up) can be selected.

*: For those scene modes with *, use of a tripod is recommended. Turn vibration reduction (128) off when using a tripod.
Panorama assist

Use when shooting a series of pictures that will later be joined to form a single panorama using the supplied Panorama Maker software.

- Camera focuses on subject in center of frame.

<table>
<thead>
<tr>
<th>Flash</th>
<th>ISO</th>
<th>WB</th>
<th>Off*</th>
<th>AWB</th>
<th>EV</th>
<th>Auto*</th>
</tr>
</thead>
</table>

* Other settings can be selected.

**Shooting Pictures for a Panorama**

The camera focuses on the subject in the center of the frame. Use a tripod for best results. Turn vibration reduction (128) off when using a tripod.

1. **Use the multi selector to choose [Panorama assist] in the scene menu and press OK.**

   The yellow panorama direction icon (△) is displayed to show the direction in which pictures will be joined.

2. **Use the multi selector to choose the direction and press OK.**

   Select how pictures will be joined together in the completed panorama: right (▶), left (◀), up (▲) or down (▼).

   The panorama direction icon (△) is displayed to the direction pressed and changes to white when OK is pressed. Apply flash mode (30), self-timer (32), focus mode (33) and exposure compensation (34) settings with this step, if necessary. Press OK to reselect the direction.

3. **Shoot the first picture.**

   The first picture is displayed in the first third of the monitor.
4 Shoot the second picture.
Compose the next picture so that it overlaps the first picture.
Repeat until you have shot the necessary number of pictures to complete the scene.

5 Press \( \text{OK} \) when shooting is completed.
The camera returns to step 2.

Panorama Assist
Flash mode (\( \text{A} \) 30), self-timer (\( \text{A} \) 32), focus (\( \text{A} \) 33) and exposure compensation (\( \text{A} \) 34) settings cannot be adjusted after the first shot. Pictures cannot be deleted, nor can zoom, image quality (\( \text{A} \) 91), or image size (\( \text{A} \) 92) be adjusted until the series is finalized.
The panorama series is terminated if the camera enters standby mode with the auto off function (\( \text{A} \) 130) during shooting. Setting the time allowed to elapse before the auto off function is enabled to a longer setting is recommended.

Exposure Lock
\( \text{EL} \) is displayed to indicate that white balance and exposure have been locked at the values set with the first shot. All pictures shot in a panorama series have the same exposure and white-balance settings.

Panorama Maker
Install Panorama Maker from the supplied Software Suite CD. Transfer pictures to a computer (\( \text{A} \) 77) and use Panorama Maker (\( \text{A} \) 80) to join them in a single panorama.

More Information
See “Image/Sound File and Folder Names” (\( \text{A} \) 140) for more information.
Anti-shake Mode

Shooting in Anti-shake Mode

In anti-shake mode, [Vibration reduction] (A 128) is enabled, and [BSS] is selected for [Continuous] (A 101). In addition, ISO sensitivity is automatically raised to 1600 depending upon the brightness of the subject, and shutter speed is faster than with [auto] mode, under the same lighting conditions, to reduce blurring caused by camera shake or subject movement. The flash is disabled. This mode is most effective when shooting under natural light. Combine it with the telephoto zoom when you are forced to shoot from a distance, in order to capture a fleeting expression on a portrait subject or to photograph an animal without frightening it off.

1 Rotate the mode dial to (①).

2 Frame the subject and shoot.
   Camera focuses on subject in center of frame.
   While the shutter-release button is held down, camera shoots up to ten pictures. They are compared and sharpest picture (picture with highest level of detail) is saved.

Notes on Anti-shake Mode

- Shutter speed is limited to a certain value for dark subjects.
- Use of the high-sensitivity shooting mode (A 44) is recommended for shooting subjects under low lighting.
- Pictures shot in this mode may become somewhat grainy.

Anti-shake Mode Settings

[Vibration reduction] (A 128) is enabled, and [BSS] is selected for [Continuous] (A 101); the flash mode is disabled. Focus mode and exposure compensation are available; the self-timer is not available.

Image Quality and Image Size in Anti-shake Mode

When MENU is pressed in anti-shake mode, the anti-shake mode menu is displayed to enable adjustment of image quality (A 91) and image size (A 92) settings. Changes made to these settings apply to all shooting modes.
High-Sensitivity Shooting Mode

Shooting in High-Sensitivity Shooting Mode

In high-sensitivity shooting mode, sensitivity is increased when shooting under low lighting, to reduce blurring caused by camera shake or subject movement, allowing you to capture the atmosphere of the scene. ISO sensitivity will be automatically increased to a maximum of 1600, depending upon the brightness of the subject.

1 Rotate the mode dial to HS.

2 Frame the subject and shoot.
   By default, the camera automatically chooses the focus area (one of nine) containing the subject closest to the camera and adjusts exposure accordingly (26, 105).

✓ Notes on High-Sensitivity Shooting Mode
   • This mode reduces effects of camera shake even for shooting under low lighting; however, when shooting without the flash, use of a tripod is recommended. Turn vibration reduction (128) off when using a tripod.
   • Pictures shot in this mode may become somewhat grainy.
   • Focus may not be precisely fixed in extremely dark places.

High-Sensitivity Shooting and Anti-Shake Modes
Both high-sensitivity shooting mode and anti-shake mode (43) reduce blurring caused by camera shake and subject movement. However, high-sensitivity shooting mode is suited for shooting under low lighting. In some circumstances, disabling the flash may make it even easier to capture the true essence of the scene.

In high-sensitivity shooting mode, pressing MENU displays the high-sensitivity menu. The items available in this menu are the same as those available in the (auto) mode shooting menu (89), except that [ISO sensitivity] is not available in the high-sensitivity menu. Just as with (auto) mode, the flash mode, self-timer, focus mode and exposure compensation are available.

In anti-shake mode, [Vibration reduction] (128) is enabled, and [BSS] is selected for [Continuous] (101), to reduce blurring caused by camera shake or subject movement, and the flash is disabled.
P, S, A, and M modes offer control over a variety of advanced settings, including shutter speed, aperture, and white balance.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>P</strong></td>
<td>Programmed auto (p. 46) Camera sets shutter speed and aperture for optimal exposure. Recommended for snapshots and in other situations in which there is little time to adjust camera settings. Flexible program, which changes the combination of shutter speed and aperture, can be used (p. 46).</td>
</tr>
<tr>
<td><strong>S</strong></td>
<td>Shutter-priority auto (p. 47) User chooses shutter speed; camera selects aperture for best results. Use to freeze or blur motion.</td>
</tr>
<tr>
<td><strong>A</strong></td>
<td>Aperture-priority auto (p. 48) User chooses aperture; camera selects shutter speed for best results. Use to blur background or bring both foreground and background into focus.</td>
</tr>
<tr>
<td><strong>M</strong></td>
<td>Manual (p. 49) User controls both shutter speed and aperture.</td>
</tr>
</tbody>
</table>

**Shutter Speed and Aperture**

The same exposure can be achieved with different combinations of shutter speed and aperture, allowing you to freeze or blur motion and control depth of field. The following figure shows how shutter speed and aperture affect exposure.

- Fast shutter speed: 1/1,000 s
- Slow shutter speed: 1/30 s
- Small aperture (large f-number): f/7.6
- Large aperture (small f-number): f/2.7
**Shooting in P (Programmed Auto)**

1. Rotate the mode dial to **P**.

2. Frame the subject, focus, and shoot.
   
   At default setting, the camera automatically selects the focus area containing the closest subject, from nine focus areas, and adjusts focus accordingly (8 105).

**Flexible Program**

In mode **P**, different combinations of shutter speed and aperture can be selected by rotating the command dial ("flexible program"). While flexible program is in effect, an asterisk (*) appears next to the mode indicator (**P**) in the monitor.

- Rotate the command dial to the right for large apertures (small f-numbers) that blur background details or fast shutter speeds that “freeze” motion.
- Rotate the command dial to the left for small apertures (large f-numbers) that increase depth of field or slow shutter speeds that blur motion.
- To restore default shutter speed and aperture settings, rotate the command dial until the asterisk next to the mode indicator is no longer displayed. Selecting another mode, or turning off the camera, also restores default shutter speed and aperture settings.

**Note on Shutter Speed**

When [Continuous], [BSS], [Continuous flash] or [Multi-shot 16] is selected for [Continuous] (8 101), or when a setting other than [Off] is selected for [Auto bracketing] (8 104), the slowest shutter speed available is down to 1/2 sec.
Shooting in P, S, A, and M Modes

Shooting in S (Shutter-Priority Auto)

1. Rotate the mode dial to S.

2. Rotate the command dial to choose the shutter speed value between 1/2,000 sec. and 8 sec.

3. Focus and shoot.
   At default setting, the camera automatically selects the focus area containing the closest subject, from nine focus areas, and adjusts focus accordingly (105).

- **S (Shutter-Priority Auto) Mode**
  - If the selected shutter speed would result in the picture being over- or underexposed, the shutter-speed display will flash when the shutter-release button is pressed halfway. Choose another shutter speed and try again.
  - At speeds slower than 1/4 sec, the shutter speed indicator will turn red to show that noise reduction (109) is recommended to reduce “noise” in the form of randomly-spaced, brightly colored dots.

- **Note on Shutter Speed**
  When [Continuous], [BSS], [Continuous flash] or [Multi-shot 16] is selected for [Continuous] (101), or when a setting other than [Off] is selected for [Auto bracketing] (104), the slowest shutter speed available is down to 1/2 sec.

- **Shutter Speed**
  A shutter speed of 1/2,000s is only available when the camera is zoomed all the way out.
Shooting in P, S, A, and M Modes

**Shooting in A (Aperture-Priority Auto)**

1. Rotate the mode dial to **A**.

2. Rotate the command dial to choose the f/-number (aperture value).
   
   When the camera is zoomed all the way out, aperture can be set to values between f/2.7 and f/7.6; at maximum zoom, aperture can be set to values between f/5.3 and f/7.3.

3. Focus and shoot.
   
   At default setting, the camera automatically selects the focus area containing the closest subject, from nine focus areas, and adjusts focus accordingly (105).

**A (Aperture-Priority Auto) Mode**

If the selected aperture would result in the picture being over- or underexposed, the aperture display will flash when the shutter-release button is pressed halfway. Choose another aperture and try again.

**Note on Shutter Speed**

When [Continuous], [BSS], [Continuous flash] or [Multi-shot 16] is selected for [Continuous] (101), or when a setting other than [Off] is selected for [Auto bracketing] (104), the slowest shutter speed available is down to 1/2 sec.

**Aperture and Zoom**

Aperture is expressed as an f-number, which is the ratio of the focal length of the lens to the effective diameter of the opening (aperture) through which light enters the camera. Large apertures (expressed by small f-numbers) let more light into the camera, small apertures (large f-numbers) less. When the camera is zoomed out, the focal length of the lens diminishes and the f-number decreases. When the camera is zoomed in, the focal length and f-number increase. In modes **A** and **M**, this effect can be minimized by selecting [On] for [Fixed aperture] (109). Aperture can be controlled in the range of f/5.1 to f/7.3.

The COOLPIX P5100 has a lens with a focal length of 7.5–26.3 mm and an aperture of f/2.7 to f/5.3.
Shooting in M (Manual)

1. Rotate the mode dial to M.

2. Press the multi selector ▶ to activate the shutter speed setting.

   The active setting switches between shutter speed and aperture each time the multi selector ▶ is pressed.

   At speeds slower than 1/4 sec., the shutter speed indicator turns red (see 47).

3. Rotate the command dial to choose a shutter speed between 1/2,000 sec. and 8 sec.

   When adjusting aperture or shutter speed, the degree of deviation from the exposure value measured by the camera is displayed for a few seconds in the exposure display.

   The degree of deviation in the exposure display is shown in EVs (-2 to +2 EV in increments of 1/3 EV). A display similar to that illustrated at right indicates that the picture will be overexposed by 1 EV (+1).

4. Press the multi selector ▶ to activate the aperture setting.
5 Rotate the command dial to choose an aperture value.
Repeat steps 2 to 5 to modify shutter speed and aperture settings until the desired exposure is achieved.

6 Focus and shoot.
At default setting, the camera automatically selects the focus area containing the closest subject, from nine focus areas, and adjust focus accordingly (105).

Note on Shutter Speed
When [Continuous], [BSS], [Continuous flash], or [Multi-shot 16] is selected for [Continuous] (101), or when a setting other than [Off] is selected for [Auto bracketing] (104), the slowest shutter speed available is down to 1/2 sec.

Shutter Speed of 1/2,000 Sec.
A shutter speed of 1/2,000 sec. is available only when the camera is zoomed all the way out.
More on Playback

Viewing Multiple Pictures: Thumbnail Playback

Rotate the zoom control to **W (☐)** (thumbnail playback) in full-frame playback mode (☐ 28) to display pictures in “contact sheets” of thumbnail images. The following operations can be performed while thumbnails are displayed.

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Choose pictures</td>
<td>![Selector arrows]</td>
<td>Press the multi selector ▲▼▶ to choose pictures.</td>
<td>10</td>

<td>![Command dial]</td>
<td>Rotate the command dial to choose pictures.</td>
<td>–</td>
</tr>
</tbody>
</table>
| Change number of pictures displayed | ![Zoom W] ![Zoom T] | Rotate the zoom control to **W (☐)**, display picture thumbnails in the following order:  
4 ➔ 9 ➔ 16  
Rotate the zoom control to **T (☐)**, the number of thumbnails changes reversely. | –  |
| Cancel thumbnail playback | ![OK] | Press **OK**.                                                            | 28 |
| Switch to shooting mode | ![Playback] ![Shutter] | Press **Playback** or the shutter-release button to switch to the mode selected with the mode dial. | 28 |

**Thumbnail Playback Mode Display**

When protected (☐ 118) pictures are displayed in thumbnail playback mode (except 16-picture thumbnail playback mode), the icons shown at right are displayed with them. Movies are displayed as film frames.
Viewing Multiple Pictures: Thumbnail Wheel Playback

Rotate the command dial in full-frame playback mode (28) to display the thumbnail wheel. The thumbnail wheel is displayed at the right of the monitor. When rotation of the command dial is stopped, the thumbnail in the center will be selected and displayed at the left of the monitor. The following operations can be performed while thumbnail wheel is displayed.

If no operations are performed for about ten seconds in thumbnail wheel playback mode, the thumbnail at the left of the monitor will be displayed in full-frame playback mode.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Taking a Closer Look: Playback Zoom

Rotating the zoom control to \( T (Q) \) (playback zoom) during full-frame playback mode (28) zooms the current picture in 3×, with the center of the picture displayed in the monitor (Quick Playback Zoom). The guide at lower right shows which portion of the picture is enlarged. Change the portion of the picture displayed by pressing the multi selector \( \uparrow, \downarrow, \leftarrow \text{ or } \rightarrow \). When using playback zoom with pictures shot using the face-priority function, the picture will be enlarged, with the face recognized during shooting, at the center of the monitor. If more than one face was recognized, the picture would be enlarged with the face, on which focus was acquired, at the center of the monitor. Press the multi selector \( \uparrow, \downarrow, \leftarrow \text{ or } \rightarrow \) to display a different recognized face.

The magnification ratio can be changed further by operating the zoom control. The zoom ratio will be displayed in the monitor, and can be increased up to 10×. The following operations can be performed while pictures are zoomed in.

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Zoom in</strong></td>
<td>( T (Q) )</td>
<td>Zoom increases each time the zoom control is rotated to ( T (Q) ), to a maximum of 10×. Zoom also increases by rotating the command dial to right.</td>
</tr>
<tr>
<td><strong>Zoom out</strong></td>
<td>( W (W) )</td>
<td>Zoom decreases each time the zoom control is rotated to ( W (W) ). When the magnification ratio reaches 1×, the display returns to full-frame playback mode. Zoom also decreases by rotating the command dial to left.</td>
</tr>
<tr>
<td><strong>View other areas of picture</strong></td>
<td></td>
<td>Press the multi selector ( \uparrow, \downarrow, \leftarrow \text{ or } \rightarrow ) to move to areas of the picture not visible in the monitor.</td>
</tr>

<td>( \text{OK} )</td>
<td>Press ( \text{OK} ).</td>
</tr>
<tr>
<td><strong>Crop picture</strong></td>
<td>( \text{MENU} )</td>
<td>Press ( \text{MENU} ) to crop current picture to contain only the portion visible in the monitor.</td>
</tr>
<tr>
<td><strong>Switch to shooting mode</strong></td>
<td>( \text{\textbf{\textcolor{red}{\vrule width 1pt}}} )</td>
<td>Press ( \text{\textbf{\textcolor{red}{\vrule width 1pt}}} ) or the shutter-release button to switch to the mode selected with the mode dial.</td>
</tr>
</tbody>
</table>
Use the COOLPIX P5100 to edit pictures in-camera and store them as separate files (140). The editing features described below are available.

### Editing Pictures

<table>
<thead>
<tr>
<th>Editing function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>D-Lighting</td>
<td>Create a copy of the current picture with enhanced brightness and contrast, brightening dark portions of the picture.</td>
</tr>
<tr>
<td>Crop</td>
<td>Enlarge the image or refine the composition and create a copy containing only the portion visible in the monitor.</td>
</tr>
<tr>
<td>Small picture</td>
<td>Create a small copy of pictures suitable for use on web pages or as e-mail attachments.</td>
</tr>
<tr>
<td>Black border</td>
<td>Create a copy with a black frame along border of the picture that provides a little more impact.</td>
</tr>
</tbody>
</table>

### Picture Editing

- Pictures shot at an image size of \(3,984 \times 2,656\), \(3,968 \times 2,232\), and \(2,992 \times 2,992\) cannot be modified using an editing function other than black border.
- The COOLPIX P5100’s editing functions may not be available for pictures shot with non-COOLPIX P5100 digital cameras.
- If a copy created using the COOLPIX P5100 is viewed on a different digital camera, the picture may not be displayed or may not be transferred to a computer.
- Editing functions are not available when there is not enough free space in the internal memory or on the memory card.

### Restrictions on Picture Editing

<table>
<thead>
<tr>
<th>1st editing</th>
<th>D-Lighting</th>
<th>Crop</th>
<th>Small picture</th>
<th>Black border</th>
</tr>
</thead>
<tbody>
<tr>
<td>D-Lighting</td>

<td>–</td>
<td>–</td>
<td>–</td>
</tr>
</tbody>
</table>

- Pictures cannot be edited twice with the same editing function.
- The D-Lighting should be done first while the restricted use of combination exists.
- A black border cannot be applied to copies created using editing functions.

### Original Pictures and Edited Copies

- Copies created with editing functions are not deleted if the original pictures are deleted. The original pictures are not deleted if copies created with editing functions are deleted.
- Edited copies are stored with the same recording date and time as the original.
- Edited copies are not marked for printing (87) or protecting (118) as the original.
Enhancing Brightness and Contrast: D-Lighting

D-Lighting can be used to create copies with enhanced brightness and contrast, brightening dark portions of a picture. Enhanced copies are stored as separate files.

1. Select the desired picture from full-frame (A 28) or thumbnail (A 51) playback mode and press MENU.

   The playback menu is displayed.

   Pictures can also be selected from thumbnail wheel playback mode (A 52).

2. Use the multi selector to choose [D-Lighting] and press OK.

   The original version will be shown on the left and the edited version will be shown on the right.

3. Choose [OK] and press OK.

   A new copy with enhanced brightness and contrast is created.

   To cancel D-Lighting, choose [Cancel] and press OK.

   D-Lighting copies can be recognized by the icon displayed during playback.

More Information

See “Image/Sound File and Folder Names” (A 140) for more information.
Creating a Cropped Copy: Crop

This function is only available when [ ] is displayed in the monitor with playback zoom (53) enabled. Cropped copies are stored as separate files.

1 Rotate the zoom control to T (○) in full-frame playback mode to zoom in on the image.

2 Refine copy composition.
   Rotate the zoom control to T or W to adjust the zoom ratio.
   Press the multi selector ▲, ▼, ◀ or ▶ to scroll the picture until only the portion you want to copy is visible in the monitor.

3 Press MENU.

4 Use the multi selector to choose [Yes] and press OK.
   A new picture, containing only the portion visible in the monitor, is created.
   To cancel creating a cropped copy, choose [No].

Depending on the size of the original picture and the zoom ratio in effect at the time the copy was created, the camera will automatically select one of the following image size settings for cropped copies (unit: pixels).

- 4,000 × 3,000
- 3,264 × 2,448
- 2,592 × 1,944
- 2,272 × 1,704
- 2,048 × 1,536
- 1,600 × 1,200
- 1,280 × 960
- 1,024 × 768
- 640 × 480
- 320 × 240
- 160 × 120

When the image size setting for cropped copies is [320×240] or [160×120], these pictures are displayed with a gray frame.

More Information
See “Image/Sound File and Folder Names” (140) for more information.
Resizing Pictures: Small Picture
Create a small copy of the current picture. Small copies are stored as JPEG files with a compression ratio of 1:16. The following sizes are available.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>640×480</td>
<td>Suited to television playback.</td>
</tr>
<tr>
<td>320×240</td>
<td>Suited to display on web pages.</td>
</tr>
<tr>
<td>160×120</td>
<td>Suitable for e-mail attachments.</td>
</tr>
</tbody>
</table>

1. Select the desired picture from full-frame (28) or thumbnail (51) playback mode and press MENU.

   The playback menu is displayed.
   Pictures can also be selected from thumbnail wheel playback mode (52).

2. Use the multi selector to choose [Small pic.] and press OK.

3. Choose the desired copy size and press OK.

4. Choose [Yes] and press OK.

   A new, smaller copy is created.
   To cancel creating a small copy, choose [No].
   The copy is displayed with a gray frame.

More Information
See “Image/Sound File and Folder Names” (140) for more information.
Adding Black Frame on Pictures: Black Border

This function creates copies with [Thin], [Medium], or [Broad] black lines, along borders of pictures. Copies with black frame are stored as separate files.

1. Select the desired picture from full-frame (A 28) or thumbnail (A 51) playback mode and press MENU.

   The playback menu is displayed.
   Pictures can also be selected from thumbnail wheel playback mode (A 52).

2. Use the multi selector to choose [Black border] and press OK.

3. Choose the desired thickness of frame and press OK.

4. Choose [Yes] and press OK.

   A new copy with black frame is created.
   To cancel creating a copy with black frame, choose [No].

Black Border

- Borders of a picture will be hidden with black lines because black portion is drawn from picture's edges according to their thickness.
- When a picture with black border are printed using printer's borderless print function, black frame may not be printed.

More Information

See “Image/Sound File and Folder Names” (A 140) for more information.
Voice Memos: Recording and Playback

Use the camera’s built-in microphone to record voice memos for pictures marked with \( \text{OK} \) in full-frame playback mode (28).

Recording Voice Memos

A voice memo, up to 20 seconds in length, will be recorded while \( \text{OK} \) is pressed down.
- Do not touch the built-in microphone during recording.
- During recording, \( \text{REC} \) and \( \text{ } \) blink in the monitor display.

Playing Voice Memos

Press \( \text{OK} \) while a picture is displayed in full-frame playback mode to play voice memo. Playback ends when the voice memo ends or \( \text{OK} \) is pressed again.
- Pictures with voice memos can be recognized by the \( \text{OK} \) and \( \text{ } \) icons.
- Use the zoom control to adjust playback volume.

Deleting Voice Memos

Select a picture with a voice memo and press \( \text{ } \). Use the multi selector to choose \( \text{ } \) and press \( \text{OK} \). Only the voice memo will be deleted.

Voice Memos

- When a picture with a voice memo attached is deleted, both the picture and its voice memo are deleted.
- If a voice memo already exists for the current picture, it must be deleted before a new voice memo can be recorded.
- The COOLPIX P5100 cannot be used to attach voice memos to pictures shot with cameras other than the COOLPIX P5100.

More Information

See “Image/Sound File and Folder Names” (140) for more information.
Viewing Pictures by Date

In calendar mode or list by date mode, pictures shot on a specified date can be displayed. When **MENU** is pressed, the calendar menu or the list by date menu is displayed, and all pictures shot on a specified date can be selected for deletion, printing, and protection.

**Selecting a Date in Calendar Mode**

1. In playback mode, hold down **Fn** and rotate the command dial to choose [Calendar]. When **Fn** is released, the camera enters calendar mode.

2. Choose the desired date and press **OK**. Dates for which pictures exist are underlined in yellow. Rotate the zoom control to **W** (헤헨) to view previous month, rotate the zoom control to **T** (헤헨) to view following month.

   The first picture for that date will be displayed in full-frame playback. Rotate the zoom control to **W** (헤헨) in full-frame playback mode to return to calendar mode.
Selecting a Date in List by Date Mode

1. In playback mode, hold down **Fn** and rotate the command dial to choose [List by date], and then release **Fn**.

   When **Fn** is released, the camera enters list by date mode.

   Dates for which pictures exist will be listed.

2. Choose the desired date and press **OK**.

   Camera lists up to 29 dates. If pictures exist for more than 29 dates, all pictures recorded earlier than most recent 29 dates will be listed together as [Others].

   The first picture for that date will be displayed in full-frame playback.

   Rotate the zoom control to **W** (확대) in full-frame playback mode to return to the date list.
## Using Calendar Mode and List by Date Mode

The following operations are possible from the date selection screen.

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select date</td>
<td></td>
<td>Use the multi selector to select a date. The date can also be selected by rotating the command dial.</td>
</tr>
<tr>
<td>Select month (calendar mode only)</td>
<td></td>
<td>Rotate the zoom control to ( W ) to view previous month, rotate the zoom control to ( T ) to view following month.</td>
</tr>
<tr>
<td>Switch to full-frame playback</td>
<td></td>
<td>Press ( W ) to display the first picture shot on the selected date. Rotate the zoom control to ( W ) in full-frame playback to return to the calendar or list by date mode selected before viewing in full-frame playback.</td>
</tr>
<tr>
<td>Delete picture</td>
<td></td>
<td>Press ( ) after selecting a date, and a confirmation dialog will be displayed. Choose [Yes] and press ( ) to delete all pictures shot on the selected date.</td>
</tr>
<tr>
<td>View calendar or list by date menu</td>
<td></td>
<td>Press ( ) to display the calendar or list by date menu.</td>
</tr>
<tr>
<td>Switch to shooting mode</td>
<td></td>
<td>Press ( ) or shutter-release button to switch to the mode selected with the mode dial.</td>
</tr>
</tbody>
</table>

### Notes on Calendar Mode and List by Date Mode

- Only the most recent 9,000 pictures can be displayed in calendar mode or in list by date mode. If a date includes the 9,001st picture, an asterisk [*] is displayed next to the number of pictures for that date.
- Pictures shot with no date stamp are not listed in these modes.
### Calendar and List by Date Menus

Press **MENU** in either mode to display the following menus for only the pictures shot on the specified date.

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>D-Lighting*</td>
<td>55</td>
</tr>
<tr>
<td>Print set</td>
<td>87</td>
</tr>
<tr>
<td>Slide show</td>
<td>117</td>
</tr>
<tr>
<td>Delete</td>
<td>118</td>
</tr>
<tr>
<td>Protect</td>
<td>118</td>
</tr>
<tr>
<td>Hide image</td>
<td>118</td>
</tr>
<tr>
<td>Small picture*</td>
<td>57</td>
</tr>
<tr>
<td>Black border*</td>
<td>58</td>
</tr>
</tbody>
</table>

* During full-frame playback only

When **MENU** is pressed in the date selection screen (p. 60, 61), options can be applied to all pictures shot on the same date, or all pictures shot on the same date can be deleted. To apply options to individual pictures, or to select individual pictures for deletion, display a picture full-frame and press **MENU**.

---

**Print Set Marking**

When print marking already exists for pictures shot on dates other than that specified, a confirmation dialog [Save print marking for other dates?] will be displayed. Select [Yes] to add the new print marking to the existing marking. Select [No] to remove the existing print marking and leave only the new marking.
Movies

Recording Movies

To shoot movies with sound recorded via the built-in microphone, follow the steps below.

1. **Rotate the mode dial to **[**](#)**.
   Exposure count display shows maximum total length of movie that can be recorded.

2. **Press the shutter-release button all the way down to start recording.**
   Camera focuses on the subject in the center focus area.
   A progress bar at the bottom of the monitor shows the amount of recording time remaining.
   To end recording, press the shutter-release button all the way down a second time.

**Recording Movies**

- Flash mode ([30](#)) can only be used for time-lapse movies. Focus mode ([33](#)) and exposure compensation ([34](#)) are available in all modes. Self-timer ([32](#)) cannot be used.
- Flash mode ([30](#)), focus mode ([33](#)), and exposure compensation ([34](#)) settings cannot be applied or changed while movies are being recorded. Apply or change settings as necessary before movie recording begins.
- Optical zoom cannot be adjusted once movie recording begins. Digital zoom cannot be applied before movie recording begins. However, digital zoom (up to 2x) can be applied while movies, other than stop-motion movies, are being recorded.
- The maximum file size for movies is 4 GB.

**Changing Movie Settings**

- Movie options or auto-focus mode can be changed ([65](#)).
- When [Movie options] is set to [Time-lapse movie](#), movies are recorded without sound.
The Movie Menu

[Movie options] and [Auto-focus mode] settings can be changed from the movie menu. Press **MENU** in movie mode to display the movie menu and use the multi selector to modify and apply settings.

Selecting Movie Options

The movie menu offers the options shown below.

<table>
<thead>
<tr>
<th>Option</th>
<th>Image size and frame rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>TV movie 640 ★</td>
<td>Image size: 640 × 480 pixels Frame rate: 30 frames per second</td>
</tr>
<tr>
<td>(default setting)</td>
<td></td>
</tr>
<tr>
<td>TV movie 640</td>
<td>Image size: 640 × 480 pixels Frame rate: 15 frames per second</td>
</tr>
<tr>
<td>Small size 320</td>
<td>Image size: 320 × 240 pixels Frame rate: 15 frames per second</td>
</tr>
<tr>
<td>Smaller size 160</td>
<td>Image size: 160 × 120 pixels Frame rate: 15 frames per second</td>
</tr>
<tr>
<td>Time-lapse movie ★</td>
<td>The camera automatically shoots pictures at intervals and joins them into a silent movie (68). Image size: 640 × 480 pixels Frame rate for playback: 30 frames per second</td>
</tr>
<tr>
<td>Sepia movie 320</td>
<td>Record movies in sepia tones. Image size: 320 × 240 pixels Frame rate: 15 frames per second</td>
</tr>
<tr>
<td>B&amp;W movie 320</td>
<td>Record movies in black and white. Image size: 320 × 240 pixels Frame rate: 15 frames per second</td>
</tr>
</tbody>
</table>

Using the Command Dial to Choose Movie Options

Movie options can also be selected by holding down **Fn** and rotating the command dial.
Movie Options and Maximum Movie Length and Frames

<table>
<thead>
<tr>
<th>Option</th>
<th>Internal memory (approx. 52 MB)</th>
<th>Memory card (256 MB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>TV movie 640★ (default setting)</td>
<td>47 sec.</td>
<td>Approx. 3 min. 40 sec.</td>
</tr>
<tr>
<td>TV movie 640</td>
<td>1 min. 33 sec.</td>
<td>Approx. 7 min. 20 sec.</td>
</tr>
<tr>
<td>Small size 320</td>
<td>3 min. 4 sec.</td>
<td>Approx. 14 min. 20 sec.</td>
</tr>
<tr>
<td>Smaller size 160</td>
<td>10 min. 10 sec.</td>
<td>Approx. 47 min. 40 sec.</td>
</tr>
<tr>
<td>Time-lapse movie★</td>
<td>555 frames</td>
<td>1,800 frames per movie</td>
</tr>
<tr>
<td>Sepia movie 320</td>
<td>3 min. 4 sec.</td>
<td>Approx. 14 min. 20 sec.</td>
</tr>
<tr>
<td>B&amp;W movie 320</td>
<td>3 min. 4 sec.</td>
<td>Approx. 14 min. 20 sec.</td>
</tr>
</tbody>
</table>

* Movies can be as long as free space in the internal memory or on the memory card allows. All figures are approximate. Maximum movie length or frames varies with make of memory card. The maximum file size for movies is 4 GB.

More Information

See “Image/Sound File and Folder Names” (140) for more information.
Auto-focus Mode
Choose how the camera focuses in movie mode.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single AF (default setting)</td>
<td>Camera focuses when shutter-release button is pressed halfway and locks at this position during shooting.</td>
</tr>
<tr>
<td>Full-time AF</td>
<td>Camera focuses continuously until focus is acquired and locked. To prevent sound of camera focusing from interfering with recording, use of [Single AF] is recommended.</td>
</tr>
</tbody>
</table>

---

67
**Time-Lapse Movies**

Record flowers opening or butterflies emerging from cocoons.

1. Use the multi selector to choose [Movie options] in the movie menu and press \( \text{OK} \).

2. Choose [Time-lapse movie★] and press \( \text{OK} \).

3. Choose the interval between shots and press \( \text{OK} \).

   Choose from intervals between 30 seconds and 60 minutes.

4. Press **MENU**.

   The camera returns to shooting mode.

5. Press the shutter-release button all the way down to start recording.

   Monitor turns off and power-on lamp blinks between shots.

   Monitor reactivates automatically for the next shot.

6. Press the shutter-release button all the way down a second time to end recording.

   Recording will automatically stop if the internal memory or memory card becomes full, or when 1,800 frames have been recorded. An 1,800-frame movie has a playback time of 60 seconds.
Time-Lapse Movie

- Flash mode (30), focus mode (33), and exposure compensation (34) cannot be adjusted after the first picture is shot. Apply the appropriate settings before shooting begins.
- To prevent the camera from turning off unexpectedly during recording, use a fully charged battery.
- To power the camera continuously for extended periods, use an AC Adapter EH-62A (available separately from Nikon) (136). Do not, under any circumstances, use another make or model of AC adapter. Failure to observe this precaution could result in overheating or in damage to the camera.
- Do not rotate the mode dial to a different setting during recording.
Movie Playback

In full-frame playback mode (28), movies are recognized by movie mode icons. To play a movie, display it in full-frame playback mode and press OK. The movie mode icon varies depending upon a movie option (65) selected in shooting mode.

Use the zoom control to adjust playback volume. Rotate the command dial to advance or rewind the movie.

Press the multi selector or to choose a control at the top of the monitor, then press OK to perform the selected operation. The following operations are available.

![Pausing](image)

### Press Description

<table>
<thead>
<tr>
<th>To</th>
<th>Press</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rewind</td>
<td>❯</td>
<td>Rewind movie. Playback resumes when OK is released.</td>
</tr>
<tr>
<td>Advance</td>
<td>➤</td>
<td>Advance movie. Playback resumes when OK is released.</td>
</tr>
</tbody>
</table>
| Pause | ✪ | Pause playback. While paused, use the multi selector to advance or rewind the movie. The following operations can be performed while playback is paused.
| | ❯ | Rewind movie by one frame. Rewind continues while OK is pressed. |
| | ➤ | Advance movie by one frame. Advance continues while OK is pressed. |
| | ✪ | Resume playback.                                                   |
| End   | ✓ | End playback and return to full-frame playback.                   |

Deleting Movie Files

Press ✪ when being played back, when displayed in full-frame playback mode (28), or when selected in thumbnail (51) or thumbnail wheel (52) playback mode. A confirmation dialog is displayed. Choose [Yes] and press OK to delete the movie, or choose [No] and press OK to return to the normal playback display without deleting the movie.
Voice Recordings

Making Voice Recordings

Audio voice recordings can be recorded over the built-in microphone and played back over the built-in speaker.

1. Rotate the mode dial to [SCENE].

2. Press [MENU] to display the scene menu, use the multi selector to choose (voice recording), and press [OK].
   
   The length of recording that can be made will be displayed.

3. Press the shutter-release button all the way down to start recording.
   
   The AF lamp lights during recording. If no operations are performed for about 30 seconds after voice recording begins, the camera’s auto off function is enabled and the monitor turns off.
   
   See “Operations During Recording” (A 72) for more information.

4. Press the shutter-release button all the way down a second time to end recording.
   
   Recording will end automatically if the internal memory or memory card becomes full, or after five hours of recording on the memory card.

More Information

See “Image/Sound File and Folder Names” (A 140) for more information.
Making Voice Recordings

**Operations During Recording**

To | Press | Description
---|---|---
Reactivate the monitor |  | If the monitor has turned off, press ▶ to reactivate.
Pause/resume recording |  | Press once to pause recording; AF lamp will blink.
Create index* | | During recording, press the multi selector ▲, ▼, ◀, or ▶ to create index. Camera can skip to any intended index during playback. Start of recording is index number 01; other numbers that follow are assigned in ascending order each time the multi selector is pressed, up to index number 98.
End recording |  | Press the shutter-release button all the way down a second time to end recording.

* The copied files can be played back using QuickTime or any other WAV-compatible audio player. Note that index points created with the camera cannot be used when voice recordings are played back on computers.
Playing Voice Recordings

1. Press \( \text{play} \) in the voice recording screen (71, step 3).

2. Use the multi selector to choose the desired sound file and press \( \text{OK} \).

The selected sound file will be played back.
Playing Voice Recordings

Operations During Playback

Use the zoom control to adjust audio playback volume.
Use the command dial to advance or rewind the voice recording.
Playback controls appear at the top of the monitor. Press the multi selector ◀ or ▶ to choose a control, then press OK to perform the selected operation. The following operations are available.

<table>
<thead>
<tr>
<th>To</th>

<td>◾</td>
<td>Pause playback. The following operations can be performed while playback is paused: Resume playback.</td>
</tr>
<tr>
<td>End</td>
<td>◯</td>
<td>End playback and return to the sound file selection screen.</td>
</tr>
</tbody>
</table>

Deleting Sound Files

Press ◯ during playback or after selecting a sound file (use the multi selector). A confirmation dialog will be displayed. To delete the file, choose [Yes] and press OK. To cancel deletion, choose [No] and press OK.
Copy voice recordings between the internal memory and a memory card. This option is available only when a memory card is inserted.

1. Press **MENU** in the select sound file screen (p. 73, step 2).

2. Use the multi selector to choose the option and press **OK**.
   - IN → : Copy recordings from internal memory to memory card
   - : Copy recordings from memory card to internal memory

3. Choose the copy option and press **OK**.
   - [Selected files]: Proceed to step 4
   - [Copy all files]: Proceed to step 5

4. Choose the desired file.
   - Press the multi selector ▶ to select the file (✓). Press the multi selector ▶ again to cancel the selection.
   - Multiple files can be selected.
   - Press **OK** to finalize file selection.

5. When a confirmation dialog is displayed, choose [Yes] and press **OK**.
   - Copying starts.

**Voice Recordings**

The COOLPIX P5100 may be unable to play or copy sound files created with cameras other than the COOLPIX P5100.

**[No sound file.] Message**

If there are no sound files stored on the memory card when **PLAY** is pressed (p. 73, step 1), the message [No sound file.] will be displayed. Press **MENU** to display the copy sound files screen, and copy the sound files stored in the camera’s internal memory to the memory card.
Connecting to Televisions, Computers and Printers

Connecting to a TV

Connect the camera to a television using the supplied audio/video cable to playback pictures on the television.

1. Turn off the camera.

2. Connect the camera to the TV using the supplied audio/video cable.
   Connect the yellow plug to the video-in jack on the TV, and the white plug to the audio-in jack.

3. Tune the television to the video channel.
   See the documentation provided with your television for details.

4. Hold down \( \text{ } \) to turn on the camera.
   The camera enters playback mode, and pictures recorded to the internal memory, or memory card, will be displayed on the television.
   While connected to the TV, the camera monitor will remain off.

Connecting an Audio/Video Cable

When connecting the audio/video cable, be sure that the camera connector is oriented correctly. Do not use force when connecting the audio/video cable to the camera. When disconnecting the audio/video cable, do not pull the connector at an angle.

Video Mode

Be sure that the camera’s video mode setting conforms to the standard used by your television. The video mode setting is an option set in the setup menu (120) > [Video mode] (132).
Connecting to a Computer

When the camera is connected to a computer using the supplied USB cable, pictures recorded with the camera can be copied (transferred) to the computer for storage using the Nikon Transfer software.

Before Connecting the Camera

Installing the Software
Before connecting the camera to a computer, software, including Nikon Transfer and Panorama Maker for creating panorama images, must be installed from the supplied Software Suite CD.
For more information on installing the software, refer to the Quick Start Guide.

Operating Systems Compatible with COOLPIX P5100

Windows
If your computer is running Windows 2000 Professional, use a card reader or similar device to transfer pictures stored on the memory card to the computer (79).

Macintosh
Mac OS X (version 10.3.9, 10.4.9)

Refer to the Nikon website for the latest information on operating system compatibility.

Notes on Power Source

- When connecting the camera to a computer or printer, use a fully-charged battery to prevent the camera from turning off unexpectedly.
- To power the camera continuously for extended periods, use an AC Adapter EH-62A (available separately from Nikon) (136). Do not, under any circumstances, use another make or model of AC adapter. Failure to observe this precaution could result in overheating or in damage to the camera.
Transferring Pictures from the Camera to a Computer

1. Start the computer to which Nikon Transfer has been installed.
2. Turn off the camera.
3. Connect the camera to the computer using the supplied USB cable.
4. Turn on the camera.

**Windows Vista/XP**

When the AutoPlay dialog is displayed, select [Copy pictures to a folder on my computer using Nikon Transfer] (Windows Vista) or [Nikon Transfer Copy pictures to a folder on my computer] (Windows XP), and click [OK] (Windows XP only). To bypass this dialog in the future, check [Always do this for this device:] (Windows Vista), or [Always use this program for this action.] (Windows XP). Nikon Transfer will start.

**Mac OS X**

Nikon Transfer will start automatically if [Yes] was selected in the Auto-Launch setting dialog when Nikon Transfer was first installed.

**Connecting the USB Cable**

Be sure that the connectors are oriented correctly, and do not use force, to connect the USB cable. When disconnecting the USB cable, do not pull the connector at an angle.

Connection may not be recognized when the camera is connected to a computer via a USB hub.
5 Transfer pictures when Nikon Transfer has finished loading.

Click [Start Transfer] in Nikon Transfer. At the default setting, all pictures are transferred to the computer.

At the Nikon Transfer default setting, the folder to which pictures are transferred is automatically opened when transfer is complete.

For more information on using Nikon Transfer, refer to help information contained in Nikon Transfer.

6 Disconnect the camera when transfer is complete.

Turn the camera off and disconnect the USB cable.

---

For Users of Windows 2000 Professional

Use a card reader or similar device to transfer the pictures stored on the memory card to the computer.

If your memory card has a capacity greater than 2 GB, the intended device must support the memory card.

- At the Nikon Transfer default settings, Nikon Transfer will start automatically when a memory card is inserted into the card reader or similar device. See step 5 above to transfer pictures.
- Do not connect the camera to the computer. If the camera is connected to the computer, the [Found New Hardware Wizard] dialog will be displayed. Select [Cancel], close the dialog, and disconnect the camera from the computer.
- To transfer pictures stored in the camera’s internal memory to the computer, the pictures must first be copied to a memory card using the camera (75, 115, 119).
Using Standard OS Operations to Open Image/Sound Files

- Navigate to the folder on the computer’s hard disk to which pictures were saved and open a picture in the viewer supplied with your operating system.
- Sound files copied to the computer can be played back using QuickTime or any other WAV-compatible audio player.

Panorama Creation with Panorama Maker

- Use a series of pictures shot using the [Panorama assist] option in scene mode (41) to create a single panorama photo with Panorama Maker.
- Panorama Maker can be installed to a computer using the supplied Software Suite CD.
- After installation is complete, follow the procedure described below to start Panorama Maker.
  
  **Windows**

  **Macintosh**

- For more information on using Panorama Maker, refer to the on-screen instructions and help information contained in Panorama Maker.

More Information

See “Image/Sound File and Folder Names” (140) for more information.
Connecting to a Printer

Users of PictBridge-compatible (157) printers can connect the camera directly to the printer and print pictures without using a computer.

**Notes on Power Source**
- When connecting the camera to a computer or printer, use a fully-charged battery to prevent the camera from turning off unexpectedly.
- To power the camera continuously for extended periods, use an AC Adapter EH-62A (available separately from Nikon) (136). *Do not, under any circumstances, use another make or model of AC adapter.* Failure to observe this precaution could result in overheating or in damage to the camera.

**Printing Pictures**
In addition to printing pictures transferred to a computer from your personal printer and printing over a direct camera-to-printer connection, the following options are also available for printing pictures:
- Insert a memory card into a DPOF-compatible printer’s card slot
- Take a memory card to a digital photo lab

For printing using these methods, specify the pictures and the number of prints each using your camera’s print set menu (87).
Connecting the Camera and Printer

1. Turn off the camera.

2. Turn on the printer.
   Check printer settings.

3. Connect the camera to the printer using the supplied USB cable.

4. Turn on the camera.
   When connected correctly, the PictBridge startup screen will be displayed in the camera monitor. Then the print selection screen will be displayed.

Connecting the USB Cable

Be sure that the connectors are oriented correctly, and do not use force, to connect the USB cable. When disconnecting the USB cable, do not pull the connector at an angle.
Connecting to a Printer

Printing Pictures One at a Time

After connecting the camera to the printer correctly (82), print pictures by following the procedure below.

1. Use the multi selector to choose the desired picture and press OK.
   The command dial can also be used to choose the picture. Rotate the zoom control to W ( ) to display 12 thumbnails, and T ( ) to switch back to full-frame playback.

2. Choose [Copies] and press OK.

3. Choose the number of copies (up to nine) and press OK.

4. Choose [Paper size] and press OK.

5. Choose the desired paper size and press OK.
   To specify paper size using printer settings, choose [Default] in the paper size menu.
Connecting to a Printer

6 Choose [Start print] and press \( \text{OK} \).

7 Printing starts.
Monitor display returns to that shown in step 1 when printing is complete.
To cancel before all copies have been printed, press \( \text{OK} \).

Printing Multiple Pictures
After connecting the camera to the printer correctly (82), print pictures by following the procedure below.

1 When the print selection screen is displayed, press \( \text{MENU} \).
The print menu is displayed.

2 Use the multi selector to choose [Paper size] and press \( \text{OK} \).
To exit to the print menu, press \( \text{MENU} \).

3 Choose the desired paper size and press \( \text{OK} \).
To specify paper size using printer settings, choose [Default] in the paper size menu.
4 Choose [Print selection], [Print all images] or [DPOF printing] and press OK.

**Print selection**

Choose the pictures and number of copies (up to nine) of each. Press the multi selector ▶ to select pictures, and press ▲ or ▼ to set the number of copies for each. The command dial can also be used to choose the pictures. Pictures selected for printing can be recognized by the check mark (✓) and the numeral indicating the number of copies to be printed. Pictures for which no copies have been specified will not be printed. Rotate the zoom control to T (✔) to switch to full-frame playback. Rotate the zoom control to W (❚) to switch back to thumbnail display. Press OK when setting is complete. The menu shown at right will be displayed. To print, choose [Start print] and press OK. Choose [Cancel] and press OK to return to the print menu.

**Print all images**

All pictures stored in the internal memory, or on the memory card, are printed one at a time. The menu shown at right will be displayed. To print, choose [Start print] and press OK. Choose [Cancel] and press OK to return to the print menu.
Connecting to a Printer

DPOF printing
Print pictures for which a print order was created in [Print set] (87).
The menu shown at right will be displayed.
To print, choose [Start print] and press OK.
Choose [Cancel] and press OK to return to the print menu.

To view the current print order, choose [View images] and press OK. To print pictures, press OK again.

5 Printing starts.
Monitor display returns to the print menu (step 2) when printing is complete.
To cancel before all copies have been printed, press OK.

Paper Size
The camera supports the following paper sizes: [Default] (the default paper size for the current printer), [3.5 × 5 in.], [5 × 7 in.], [100 × 150mm], [4 × 6 in.], [8 × 10 in.], [Letter], [A3], and [A4]. Only sizes supported by the current printer will be displayed. To specify paper size using printer settings, choose [Default] in the paper size menu.
Connecting to Televisions, Computers and Printers

Creating a DPOF Print Order: Print Set

The [Print set] option in the playback menu is used to create digital “print orders” for printing on DPOF-compatible devices (157).

When the camera is connected to a PictBridge-compatible printer, pictures can be printed from the printer according to the DPOF print order you have created for pictures on the memory card. If the memory card is removed from the camera, you can create the DPOF print order for pictures in the internal memory and print pictures according to the DPOF print order.

1. Press MENU in playback mode.
   The playback menu is displayed.

2. Use the multi selector to choose [Print set] and press OK.
   The print set menu is displayed.

3. Choose [Print selected] and press OK.

4. Choose the pictures and number of copies (up to nine) of each.
   Press the multi selector ▲▼ to select pictures, and press ▲ or ▼ to set the number of copies for each. The command dial can also be used to choose the pictures. Pictures selected for printing can be recognized by the check mark (✓) icon and the numeral indicating the number of copies to be printed. The pictures for which no copies have been specified will not be printed.
   Rotate the zoom control to T (Zoom) to switch to full-frame playback.
   Rotate the zoom control to W (Zoom) to switch back to thumbnail display.
   Press OK when setting is complete.
5 Choose whether or not to also print shooting date and photo information.

Choose [Date] and press \( \text{OK} \) to print date of recording on all pictures in the print order.

Choose [Info] and press \( \text{OK} \) to print photo information (shutter speed and aperture) on all pictures in the print order.

Choose [Done] and press \( \text{OK} \) to complete the print order and exit.

Pictures selected for printing are recognized by the \( \text{\( \infty \)} \) icon displayed during playback.

Notes on Printing Shooting Date and Photo Information

When the [Date] and [Info] options are enabled in the print set menu, shooting date and photo information are printed on pictures when a DPOF-compatible (157) printer which supports printing of shooting date and photo information is used.

- Photo information cannot be printed when the camera is connected directly to a printer, via the supplied USB cable, for DPOF printing (86).
- [Date] and [Info] are reset each time the print set menu is displayed.

Deleting All Print Orders

Choose [Delete print set] in step 3 and press \( \text{OK} \). Print orders for all pictures will be deleted.

Note on the Print Set [Date] Option

The date and time printed on pictures with DPOF printing, when [Date] in the print set menu is enabled, are those recorded with the picture as it was shot. Date and time printed using this option are not affected when the camera’s date and time setting are changed from the setup menu after pictures are recorded.

Date Imprint

When date and time of recording are imprinted on pictures using the [Date imprint] option (126) in the setup menu, pictures with the date and time imprinted on them can be printed from printers that do not support printing of the date and time on pictures. Only the [Date imprint] date and time on pictures will be printed, even if [Print set] is enabled with [Date] selected in the print set screen.
Shooting, Playback and Setup Menus

Shooting Options: The Shooting Menu

The shooting menu of P, S, A, and M modes, and high-sensitivity menu of high-sensitivity shooting mode, contain the following options.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Image quality¹</td>
<td>Choose the image quality (compression ratio) of recorded pictures.</td>
</tr>
<tr>
<td>Image size¹, ³</td>
<td>Choose the image size of recorded pictures.</td>
</tr>
<tr>
<td>Optimize image³</td>
<td>Control contrast, sharpness, and saturation.</td>
</tr>
<tr>
<td>White balance³</td>
<td>Match white balance to the light source.</td>
</tr>
<tr>
<td>ISO sensitivity², ³</td>
<td>Control the camera’s sensitivity to light.</td>
</tr>
<tr>
<td>Metering</td>
<td>Choose how the camera meters exposure.</td>
</tr>
<tr>
<td>Continuous³</td>
<td>Select the option to shoot pictures one at a time, in a sequence, or with</td>
</tr>
<tr>
<td></td>
<td>Best Shot Selector (BSS).</td>
</tr>
<tr>
<td>Auto bracketing³</td>
<td>Vary exposure over a sequence of pictures.</td>
</tr>
<tr>
<td>AF area mode³</td>
<td>Choose where the camera focuses.</td>
</tr>
<tr>
<td>Auto-focus mode</td>
<td>Choose how the camera focuses.</td>
</tr>
<tr>
<td>Flash exp. comp.</td>
<td>Adjust flash level.</td>
</tr>
<tr>
<td>Flash control</td>
<td>Control built-in flash.</td>
</tr>
<tr>

<td>Choose whether aperture changes with zoom position.</td>
</tr>
<tr>
<td>Noise reduction³</td>
<td>Reduce noise in pictures shot at slow shutter speeds.</td>
</tr>
</tbody>
</table>
Shooting Options: The Shooting Menu

Converter³
Adjust settings for converter lenses (available separately from Nikon).

User setting
Store button and shooting menu settings in two separate user setting banks.

Reset user setting
Restore user settings to their default values.

Distortion control³
Correct the distortion.

1 Settings can be applied from other shooting menus (except the movie menu).
2 This setting cannot be set in the high-sensitivity menu.
3 See the information on restrictions that may apply to these settings (112).

Displaying the Shooting Menu and High-sensitivity Menu
Choose P (Programmed Auto), S (Shutter-Priority Auto), A (Aperture-Priority Auto), M (Manual), or H (high sensitivity) by rotating the mode dial. Press MENU to display the shooting menu or high-sensitivity menu.

- The high sensitivity menu is displayed when H is selected by the mode dial.
- To return to the shooting mode from the shooting or high-sensitivity menu, press MENU or the shutter-release button.

Navigating the Camera Menu
Press the multi selector ▲ or ▼ to select items and set functions on menus (10). The command dial can also be used in place of the multi selector.
Image Quality

Choose the amount of compression applied to pictures. Lower compression ratios result in higher quality pictures, but also larger file sizes, limiting the number of pictures that can be recorded.

<table>
<thead>
<tr>
<th>Fine</th>
<th>Fine quality images (compression ratio of 1:4), suitable for enlargement or high-quality prints.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>Normal image quality (compression of 1:8), suited to most applications.</td>
</tr>
<tr>
<td>Basic</td>
<td>Basic image quality (compression of 1:16), suitable for pictures that will be distributed by e-mail or used in web pages.</td>
</tr>
</tbody>
</table>

Image quality is shown by an icon in the monitor (6, 7).

More Information

See “Number of Exposures Remaining” (93) for more information.
Image Size

Choose the size of pictures in pixels for recording. Pictures shot at smaller sizes require less memory, making them suited to distribution by e-mail or the web. Conversely, the larger the image, the larger the size at which it can be printed or displayed without becoming noticeably “grainy,” limiting the number of pictures that can be recorded.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4000×3000</td>
<td>Record pictures exhibiting greater detail than those shot at 3264×2448 or 2592×1944.</td>
</tr>
<tr>
<td>3264×2448</td>
<td>Good balance between file size and quality makes this the best choice in most situations.</td>
</tr>
<tr>
<td>2592×1944</td>
<td></td>
</tr>
<tr>
<td>2048×1536</td>
<td>Smaller than 4000×3000, 3264×2448, and 2592×1944 for recording more pictures.</td>
</tr>
<tr>
<td>1600×1200</td>
<td></td>
</tr>
<tr>

</tr>
<tr>
<td>640×480</td>
<td>Record pictures suited to display on a television, or to distribution via e-mail or the web.</td>
</tr>
<tr>
<td>3984×2656</td>
<td>Record pictures with the same aspect ratio (3:2) as those shot with 35mm film cameras.</td>
</tr>
<tr>
<td>3968×2232</td>
<td>Record pictures with the same aspect ratio (16:9) as wide-screen televisions.</td>
</tr>
<tr>
<td>2992×2992</td>
<td>Record perfectly square pictures.</td>
</tr>
</tbody>
</table>

Image size is shown by an icon in the monitor (6, 7).
The following table lists the approximate number of pictures that can be stored in internal memory, and on a 256-MB memory card, at each combination of image quality (400) and image size (91) settings. Note that the number of pictures that can be stored will differ depending on the composition of the picture (due to JPEG compression). In addition, this number may differ depending on the make of memory card, even if the capacity for the memory card is the same.

<table>
<thead>

</tbody>
</table>

1 If the number of exposures remaining is 10,000 or more, the number of exposures remaining display shows [9999].

2 Print sizes are calculated by dividing the number of pixels by printer resolution (dpi) and multiplying by 2.54 cm (1 in.). However, at the same image size, pictures printed at higher resolutions will print smaller the size indicated, and those printed at lower resolutions will print larger than the size indicated.
Optimize Image

Optimize contrast, sharpening, and other settings according to how pictures will be used or the type of scene.

- **Normal (default setting)**
  Recommended in most situations.

- **Softer**
  Softens outlines, producing natural results suitable for portraits or retouching on a computer.

- **Vivid**
  Enhances saturation, contrast, and sharpness to produce vivid images with vibrant reds, greens, and blues.

- **More vivid**
  Maximizes saturation, contrast, and sharpness to produce crisp images with sharp outlines.

- **Portait**
  Lowers contrast while lending natural texture and rounded feel to skin of portrait subjects.

- **Custom**
  Customize image optimization settings (95).

- **Black-and-white**
  Shoot photos in black-and-white (96).

The indicator for the current optimize image setting is displayed in the monitor during shooting (6).

---

Optimize Image

At settings other than [Custom] and [Black-and-white] > [Custom], results are optimized for current shooting conditions and vary with exposure and the position of the subject in the frame. For consistent results over a series of photographs, select [Custom] and choose a setting other than [Auto] for contrast, sharpening, and saturation.
Customizing Image Enhancement Options: [Custom]
Select [Custom] to make separate adjustments to the following options.

Contrast
Control contrast. Lower settings prevent loss of detail in highlights under harsh lighting or in direct sunlight. Higher settings preserve detail in misty landscapes and other low-contrast subjects. The default setting is [Auto].

Image sharpening
Choose how much outlines are sharpened during shooting. Choose high settings for sharp outlines, low settings for softer outlines. The default setting is [Auto].

Saturation
Control the vividness of colors. Choose [Moderate] for less saturated colors, [Enhanced] for more vivid colors. The default setting is [Auto].

Note on Image Sharpening
The effects of image sharpening cannot be previewed in the monitor during shooting. Check results in playback mode.
Shooting in Black-and-White: [Black-and-White]

When [Black-and-white] is selected, the options described below are available.
Choose [Standard] to shoot in basic black-and-white, or [Custom] to manually adjust contrast, sharpening, and filter effects. When the [B&W + color] option is enabled (✓), one black-and-white picture and the same picture in full color are recorded simultaneously.

The following options can be adjusted in [Custom].

### Contrast

Same as [Optimize image] > [Custom] > [Contrast] (95).

### Image sharpening

Same as [Optimize image] > [Custom] > [Image sharpening] (95).

### Monochrome filter

This effect simulates black-and-white photography with a color filter.

[Yellow], [Orange], [Red]
Enhance contrast. Can be used to tone down the brightness of the sky in landscape photographs. Orange filter results in greater contrast than yellow filter, and red filter greater contrast than orange filter.

[Green]
Softens skin tones. Suitable for portraits.

### B&W + Color

Color pictures recorded when [B&W + color] is enabled are the same as those shot at an [Optimize image] setting of [Normal].
White Balance

The color of light reflected from an object varies with the color of the light source. The human brain is able to adapt to changes in the color of the light source, with the result that white objects appear white whether seen in the shade, direct sunlight, or under incandescent lighting. Digital cameras can mimic this adjustment by processing images according to the color of the light source. This is known as “white balance.” For natural coloration, choose a white balance setting that matches the light source before shooting. Although the default setting, [Auto], can be used under most types of lighting, you can apply the white balance setting suited to a particular light source to achieve more accurate results.

- **Auto (default setting)**
  White balance automatically adjusted to suit lighting conditions. Best choice in most situations.

- **Preset manual**
  Neutral-colored object used as reference to set white balance under unusual lighting conditions, see “Preset Manual” (98) for details.

- **Daylight**
  White balance adjusted for direct sunlight.

- **Incandescent**
  Use under incandescent lighting.

- **Fluorescent**
  Use under most types of fluorescent lighting.

- **Cloudy**
  Use when shooting under overcast skies.

- **Flash**
  Use with the flash mode.

The effects of the selected option can be previewed in the monitor. At settings other than [Auto], the icon for the current setting is displayed in the monitor (6).

Flash Mode

At white-balance settings other than [Auto] or [Flash], turn the flash off (30).
Preset Manual
Preset manual is used with mixed lighting or to compensate for light sources with a strong color cast (for example, to make pictures shot under a lamp with a red shade look as though they had been shot under white light).

1 Place a white or gray reference object under the lighting that will be used during shooting.

2 Use the multi selector to choose [Preset manual] in the white balance menu, and press OK. The camera zooms in.

3 Choose [Measure]. To apply the most recently measured value for preset manual, choose [Cancel] and press OK.

4 Frame the reference object.

5 Press OK. The shutter is released and the new white-balance value is set. No pictures are recorded.

Note on Preset Manual
Regardless of the flash mode selected, the flash will not fire when OK is pressed in step 5. Therefore, the camera cannot measure a value for preset manual for when the flash is used.
ISO Sensitivity

Sensitivity is a measure of how quickly the camera reacts to light. The higher the sensitivity, the less light needed to make an exposure. Although a high ISO rating is suited for shooting pictures of subjects in action or in poor lighting, high sensitivity is often associated with “noise” - randomly spaced, brightly colored pixels concentrated in dark parts of the image.

Auto (default setting)

Sensitivity is ISO 64 under normal conditions; when lighting is poor and the flash is off, the camera compensates by raising sensitivity to a maximum of ISO 800. When a Speedlight (available separately from Nikon) is used with sensitivity set to [Auto], the maximum sensitivity applied is ISO 400. In M mode, sensitivity will be locked at ISO 64.

Fixed range auto

Choose the range in which the camera automatically adjusts ISO sensitivity, in P, S, and A modes, from [ISO 64 - 100] (default setting), [ISO 64 - 200], or [ISO 64 - 400]. The camera will not raise sensitivity beyond the maximum value in the selected range for effective control over the amount of “grain” that appears in images. In M mode, sensitivity will be locked at ISO 64.

64, 100, 200, 400, 800, 1600, 2000, 3200

Sensitivity will be locked at the specified value.

At the settings other than [Auto], the current setting is displayed in the monitor (6). If [Auto] is selected and the sensitivity is raised above ISO 64, the icon will be displayed (31). When [Fixed range auto] is selected, the maximum value of + the sensitivity will be displayed.

Notes on ISO 3200

- When [3200] is selected for ISO sensitivity, image size is displayed in red during shooting.
- When [ISO sensitivity] is set to [3200], [Image size] cannot be set to [4000x3000], [3264x2448], [3984x2656], [3968x2232], and [2992x2992]. At these image size settings, selecting [3200] for [ISO sensitivity] automatically switches the [Image size] setting to [2592x1944]. When any option other than [3200] is next selected for [ISO sensitivity], the original image size setting is restored.
- At an [ISO sensitivity] setting of [3200], the [Multi-shot 16] (101) option of the continuous shooting mode is not available. At a [Continuous] setting of [Multi-shot 16], selecting [3200] for [ISO sensitivity] switches the [Continuous] setting to [Single]. The [Continuous] setting does not change even when [ISO sensitivity] is set to options other than [3200].

Note on Shutter Speed

When [1600], [2000], or [3200] is selected for [ISO sensitivity], the slowest shutter speed available is down to 2 sec.
Shooting Options: The Shooting Menu

**Metering**

Choose how the camera meters exposure.

- **Matrix (default setting)**
  Camera sets exposure for entire frame. Recommended in most situations.

- **Center-weighted**
  Camera meters entire frame but assigns greatest weight to subject in center of frame. Classic meter for portraits; preserves background details while letting lighting conditions at center of frame determine exposure. Can be used with focus lock (27) to meter off-center subjects.

- **Spot**
  Camera meters area shown by circle in center of frame. Ensures that subject in metering target is correctly exposed even if background is much lighter or darker. Can be used with focus lock (27) to meter off-center subjects.

- **Spot AF area**
  Camera meters selected focus area (105). Available only when a setting other than [Center] is selected for [AF area mode].

**Note on Metering**

When digital zoom is in effect, at magnifications of 1.2× to 1.8×, [Metering] is set to [Center-weighted], and at magnifications of 2.0× to 4.0×, [Metering] is set to [Spot]. When digital zoom is in effect, the metered area is not shown in the monitor.

**Metering Area**

The active metering area is displayed in the monitor when [Center-weighted] or [Spot] is selected.
Continuous

Capture motion in a series of pictures and apply Best Shot Selector (BSS). When [Continuous], [BSS], or [Multi-shot 16] is selected, the flash will be disabled. At settings other than [Intvl timer shooting], focus, exposure and white balance are fixed at the values for the first picture in each series.

Single (default setting)

One picture is shot each time shutter-release button is pressed.

Continuous

While the shutter-release button is held down, up to 5 pictures are shot at a rate of about 1.0 frames per second (fps) when image quality is set to [Normal] and image size is set to [4000×3000].

BSS

BSS is recommended for shooting under low lighting without the flash, with the camera zoomed in, or in other situations in which camera shake is likely to blur pictures.

When Best Shot Selector (BSS) is enabled, the camera shoots up to ten pictures while the shutter-release button is held down. The sharpest picture (picture with the most detail) in the series is automatically selected and saved.

Continuous flash

While the shutter-release button is held down, the camera shoots three flash pictures, at up to 1.0 fps, when image quality is set to [Normal] and image size is set to [4000×3000]. Once shooting ends, no additional pictures can be shot until built-in flash has charged. Because ISO sensitivity is raised during shooting, pictures may be affected by “noise” (randomly-spaced, brightly-colored dots).

Multi-shot 16

Each time shutter-release button is pressed, camera shoots 16 pictures at about 1.0 frames per second and arranges them in a single picture with image quality is set to [Normal] and image size is set to [2592×1944].

Digital zoom cannot be applied.

At an [ISO sensitivity] setting of [3200], the [Multi-shot 16] option is not available.

When shooting with the [Multi-shot 16] option, select options other than [3200] for [ISO sensitivity] and select [Multi-shot 16] for [Continuous].

Intvl timer shooting

Camera shoots (up to 1,800 frames) automatically at specified interval.

At settings other than [Single], the indicator for the current setting is displayed in the monitor.
Note on Best Shot Selector
BSS may not produce the desired results if the subject moves or the composition changes while the shutter-release button is pressed all the way down.

Note on Continuous Flash
When [Continuous flash] is selected for [Continuous], turning on the Speedlight will change the option to [Single].

Note on Shutter Speed
When [Continuous], [BSS], [Continuous flash], or [Multi-shot 16] is selected for [Continuous] (101), or when a setting other than [Off] is selected for [Auto bracketing] (104), the slowest shutter speed available is down to 1/2 sec.

Note on Continuous Shooting
The maximum frame rate with continuous shooting may vary, depending upon the current image quality setting, image size setting, and the memory card used.

More Information
See “Built-in flash, Speedlights (available separately from Nikon)” (114) and “Using Optional Speedlights” (139) for more information.
Interval Timer Photography
Pictures are shot automatically at specified intervals. Choose from intervals between 30 seconds and 60 minutes.

1. Use the multi selector to choose [Intvl timer shooting] in the continuous menu, and press OK.

2. Choose interval between shots and press OK.

3. Press MENU. The camera returns to shooting mode.

4. Press the shutter-release button all the way down to shoot the first picture and initiate interval timer shooting. Monitor turns off and power-on lamp blinks between shots. The monitor turns back on automatically right before the next picture is shot.

5. Press the shutter-release button all the way down a second time to end recording. Recording will end automatically if the internal memory or memory card becomes full, or when 1,800 pictures have been recorded.

Note on Interval Timer Shooting
- To prevent the camera from turning off unexpectedly during recording, use a fully charged battery.
- To power the camera continuously for extended periods, use an AC Adapter EH-62A (available separately from Nikon) (136). Do not, under any circumstances, use another make or model of AC adapter. Failure to observe this precaution could result in overheating or in damage to the camera.
- Do not rotate the mode dial, while performing interval-timer shooting.

More Information
See “Image/Sound File and Folder Names” (140) for more information.
Auto Bracketing

Auto bracketing is used to vary exposure by a selected amount over a series of pictures, “bracketing” the exposure value selected by the camera or with exposure compensation. Use in situations in which it is difficult to guess the correct exposure.

- **±0.3**
  Camera varies exposure by 0 EV, +0.3 EV, and –0.3 EV over next three shots. Keep shutter-release button pressed to take all three shots in sequence.

- **±0.7**
  Camera varies exposure by 0 EV, +0.7 EV, and –0.7 EV over next three shots. Keep shutter-release button pressed to take all three shots in sequence.

- **±1.0**
  Camera varies exposure by 0 EV, +1.0 EV, and –1.0 EV over next three shots. Keep shutter-release button pressed to take all three shots in sequence.

- **Off (default setting)**
  Bracketing is not performed.

At settings other than [Off], the icon for the current setting is displayed in the monitor during shooting (6).

**Notes on Auto Bracketing**

- Auto bracketing is not available in M mode.
- When exposure compensation is applied (34), and [±0.3], [±0.7], or [±1.0] is selected for [Auto bracketing], the combined exposure compensation values will be applied.
- When a setting other than [Off] is selected for [Auto bracketing], the slowest shutter speed available is down to 1/2 sec.
### [+] AF Area Mode

Use this option to determine where the camera focuses. When digital zoom is effect, the camera will focus on the subject in the center focus area regardless of the applied [AF area mode] option.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Face priority</td>
<td>The camera automatically detects and focuses on a face looking toward the camera (Shooting with Face-Priority $\rightarrow$ 106). When shooting pictures of subjects other than people, or framing a subject with which no face is recognized, [AF area mode] will be set to [Auto]. The camera chooses the focus area (one of nine) containing the subject closest to the camera and focuses on the subject. When the monitor has been turned off, the camera focuses using only the center focus area.</td>
</tr>
<tr>
<td>Auto (default setting)</td>
<td>Camera automatically selects the focus area (one of nine) containing the subject closest to the camera. Press the shutter-release button halfway to activate the focus area. When the shutter-release button is pressed halfway, the focus area selected by the camera will be displayed in the monitor. When the monitor has been turned off, the camera focuses using only the center focus area.</td>
</tr>
<tr>
<td>Manual</td>
<td>This option is suited to situations in which the intended subject is relatively still and not positioned in the center of the frame. Press the multi selector $\uparrow$, $\downarrow$, $\leftarrow$ or $\rightarrow$ to select from 99 focus areas in the frame. Pictures can be shot while focus-area selection screen is displayed. To end focus-area selection and adjust the flash mode, focus mode, self-timer and exposure compensation settings, press $\mathbb{X}$. To return to the focus-area selection screen, press $\mathbb{X}$. - At an [Image size] setting (92) of [1] 2992×2992, 81 focus areas are available.</td>
</tr>
</tbody>
</table>
Shooting Options: The Shooting Menu

Shooting with Face-Priority

When [Face priority] is selected for [AF area mode], or the [Portrait] scene mode or [Night portrait] scene mode is selected during shooting, the face-priority function will be applied.

The camera automatically detects and focuses on a face looking toward the camera.

1 Frame the picture.

When the camera detects a face, the focus area containing the face will be displayed with a yellow double border.
When the camera detects more than one face, the closest face is framed by a double border and the others by single borders. Up to 12 faces can be detected.

2 Press the shutter-release button halfway.

The camera focuses on the face framed by the double border. The double border will glow green and focus will be locked.

When the double border blinks, the camera is unable to focus. Press the shutter-release button halfway again to focus.

Press the shutter-release button all the way down to shoot.
Face-Priority

- When [Face priority] is selected for [AF area mode], the setting will automatically switch to [Auto] if no face is recognized when the shutter-release button is pressed halfway.
- If no face is recognized when the shutter-release button is pressed halfway in [Portrait] or [Night portrait] scene mode, the camera will focus on the subject in the center focus area.
- If [Face priority] is selected for [AF area mode] with framing guides displayed, the monitor setting changes so that shooting data is displayed.
- The camera may be unable to detect faces in the following situations:
  - When faces are partially hidden by sunglasses or other obstructions
  - When faces take up too much or too little of the frame
  - When the subject is not looking directly at the camera
- The camera’s ability to detect faces depends on a variety of factors, including whether or not the subject is facing the camera.
- In some rare cases shooting subjects with which autofocus may not perform as expected (A 27), the subject may not be in focus despite the fact that the focus area glows green. Should this occur, switch to (auto) mode or change the [AF area mode] setting to [Manual] or [Center] in high-sensitivity shooting, P, S, A, and M modes, refocus on another subject positioned at the same distance from the camera as the actual portrait subject, and use focus lock (A 27).
- When a face is detected during shooting, pictures will be rotated automatically, in full-frame and thumbnail playback modes, according to the orientation of the face detected.

More Information

See “Autofocus” (A 27) for more information.

Auto-focus Mode

Choose how the camera focuses.

- **Single AF (default setting)**
  Camera focuses when shutter-release button is pressed halfway.

- **Full-time AF**
  Camera adjusts focus continuously until shutter-release button is pressed halfway. Use with moving subjects.
Flash Exp. Comp.
Flash compensation is used to adjust flash output by ±2.0 EV in increments of 1/3 EV, changing the brightness of the main subject relative to the background. When the Speedlight SB-400, SB-600, or SB-800 flash unit (available separately from Nikon) is mounted on the camera, flash output for the flash (available separately from Nikon) is adjusted.

-0.3 - -2.0
Flash output is reduced from -0.3 to -2.0 EV, in increments of 1/3 EV, to prevent unwanted highlights or reflections.

0 (default setting)
Flash output is not adjusted.

+0.3 - +2.0
Flash output is increased from +0.3 to +2.0 EV, in increments of 1/3 EV, to make the main subject of the frame appear brighter.

At settings other than [0], the icon for the current setting is displayed in the monitor during shooting.

Flash Control
Specify whether or not the built-in flash fires when a flash unit (available separately from Nikon) mounted on the camera's accessory shoe is not used.

Auto (default setting)
When a flash (available separately from Nikon) is mounted, the flash fires. When there is no flash mounted on the accessory shoe, the built-in flash fires.

Built-in off
The built-in flash is disabled.

Notes on Flash Control
When [Flash control] is set to [Built-in off], only Auto (Auto), and (Off), and (Fill flash) flash modes are available.
### Fixed Aperture

Choose whether aperture varies with zoom position.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On</strong></td>
<td>In A and M modes, aperture is kept as close as possible to selected f-number. To prevent selected f-number from exceeding exposure range at new zoom position, set aperture to around f/5.1–f/7.3.</td>
</tr>
<tr>
<td><strong>Off (default setting)</strong></td>
<td>Aperture varies with zoom position.</td>
</tr>
</tbody>
</table>

### Noise Reduction

At slow shutter speeds, pictures may be affected by “noise” in the form of randomly-spaced, brightly-colored dots concentrated in dark parts of the image. Use this option to reduce noise at slow shutter speeds. Enabling noise reduction increases the time needed to record pictures after they are shot.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Auto</strong></td>
<td>Auto (default setting)</td>
</tr>
<tr>
<td></td>
<td>Noise reduction is performed at slow shutter speeds, likely to result in pictures affected by noise. When a setting other than [Single] or [Intvl timer shooting] is selected for [Continuous], or when a setting other than [Off] is selected for [Auto bracketing], noise reduction will not be performed.</td>
</tr>
<tr>
<td><strong>On</strong></td>
<td>Noise reduction is applied to pictures shot at shutter speeds slower than 1/4 sec. [On] is recommended when shooting at slow shutter speeds. Only [Single] or [Intvl timer shooting] can be selected for [Continuous]. [Auto bracketing] cannot be applied.</td>
</tr>
</tbody>
</table>

When noise reduction is performed, the icon is displayed in the monitor during shooting (6).
Converter

This option is for use with the Step-down Ring Adapter UR-E20 (available separately from Nikon) to attach the converter lenses (available separately from Nikon) listed below. For more information, see “Attaching Converter Lenses” (138) of this manual or the documentation provided with the converter lens.

**None (default setting)**

No modifications made to camera settings. Use when no converter lens is attached (be sure to remove lens adapter ring).

**Wide-angle converter**

Use with the Wide-angle Converter WC-E67. When selecting this option, the camera is zoomed out to the maximum wide-angle position. Enjoy wide-angle shooting at a focal length of roughly 23.5 mm (0.9 in.) (equivalent with 35mm [135] picture angle) when [Distortion control] is set to [Off] and the camera is zoomed out to the maximum wide-angle position. The full range of optical zoom is available, however, by its very nature, best results are achieved with the camera zoomed out to the maximum wide-angle position. Digital zoom is not available.

**Telephoto converter**

Use with the Telephoto Converter TC-E3ED. When selecting this option, the camera is zoomed to the maximum telephoto position. Enjoy telephoto shooting at a focal length of roughly 369 mm (14.5 in.) (equivalent with 35mm [135] picture angle) with the camera zoomed in to the maximum telephoto position. Optical zoom is limited to near the maximum telephoto position. Focus mode (33) cannot be adjusted.

At settings other than [None], the icon for the current setting is displayed in the monitor during shooting (6).
**Notes on Converter**

- Be sure to select the appropriate option when using a converter lens. Select [None] when no converter lens is attached.
- At settings other than [None], the built-in flash and AF-assist illuminator turn off. [Continuous flash] cannot be used. Flash units (available separately from Nikon) can still be used, although the converter may cast shadows in pictures shot with the Speedlight SB-400, SB-600, or SB-800 (p. 139; a wide panel is recommended when shooting with the Speedlight SB-600 or SB-800). Check pictures in the monitor after shooting.

**User Setting**

Fourteen shooting menu settings and three button operations can be stored in two separate “banks,” 1 and 2. Assigning different settings to each bank allows for quick adjustment of settings to suit a variety of situations. The setting assigned for each function is stored, as is, in the designated user setting bank when the camera is turned off. The following settings can be stored in user setting banks.

<table>
<thead>
<tr>
<th>1. Image quality</th>
<th>2. ISO sensitivity</th>
<th>3. AF area mode</th>
<th>4. Fixed aperture</th>
</tr>
</thead>
<tbody>
<tr>
<td>17. (Flash mode)</td>
<td>18. (exposure compensation)</td>
<td>19. (Focus mode)</td>
<td></td>
</tr>
</tbody>
</table>

1. The current image quality and size settings will be displayed. These settings will not be stored in user setting banks.
2. Preset white balance value measured using [Preset manual] cannot be stored in either user settings bank.
3. In high-sensitivity shooting mode, ISO sensitivity is automatically set so that [Auto] is displayed. When any mode other than high-sensitivity shooting mode is selected, the setting assigned to the bank will be recalled.
4. Focus area selected in [Manual] can be stored in user settings banks.
Reset User Setting

Choose [Yes] to restore all settings in the selected user setting bank to their default values. For further information on settings that can be stored in user setting banks, see [User setting] (111).

Distortion Control

Specify whether or not the distortion is corrected. Enabling distortion control reduces the size of the frame.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On</strong></td>
<td>Distortion at frame peripheries is corrected.</td>
</tr>
<tr>
<td><strong>OFF</strong></td>
<td>Off (default setting)</td>
</tr>
<tr>
<td></td>
<td>No distortion correction performed.</td>
</tr>
</tbody>
</table>

Restrictions on Camera Settings

Restrictions apply to the following settings in P, S, A, M, and HS (high sensitivity) modes.

Flash mode

Flash mode is disabled (3) when [Continuous], [BSS], or [Multi-shot 16] is selected for [Continuous], when [Auto bracketing] is enabled, or at [Converter] settings of [Wide-angle converter] or [Telephoto converter]. When [Continuous] is set to [Continuous flash], the flash mode is set to 4. Applied setting is restored when [Single] or [Intvl timer shooting] is selected for [Continuous], or [Auto bracketing] is turned off.

Self-timer

If self-timer is on, only one picture will be shot when shutter is released, regardless of settings chosen for [Continuous] and [Auto bracketing]. Applied [Continuous] and [Auto bracketing] settings are restored when picture is shot or self-timer is turned off.
Focus mode

[Infinity] is not available when [Continuous] is set to [Continuous flash]. If [Continuous] is set to [Continuous flash] while focus mode is set to [Infinity], the focus mode setting automatically switches to [Autofocus].

When [Face priority] is selected for [AF area mode], setting focus mode to [Infinity] changes [AF area mode] to [Auto]. Selecting an option other than [Infinity] for focus mode restores [AF area mode] to [Face priority].

Optimize image

Enabling the [B&W + color] option (✓) for the [Black-and-white] item in the [Optimize image] menu changes the [Continuous] setting to [Single] and the [Auto bracketing] setting to [Off]. These [Continuous] and [Auto bracketing] settings do not change when the [B&W + color] option is disabled.

ISO sensitivity

When [ISO sensitivity] is set to [3200], [Image size] cannot be set to [4000×3000], [3264×2448], [3984×2656], [3968×2232], and [2992×2992]. At these image size settings, selecting [3200] for [ISO sensitivity] automatically switches the [Image size] setting to [2592×1944]. When any option other than [3200] is next selected for [ISO sensitivity], the original image size setting is restored.

At an [ISO sensitivity] setting of [3200], the [Multi-shot 16] option of the continuous shooting mode is not available. At a [Continuous] setting of [Multi-shot 16], selecting [3200] for [ISO sensitivity] switches the [Continuous] setting to [Single]. The [Continuous] setting does not change even when [ISO sensitivity] is set to options other than [3200].

Continuous

Auto bracketing

When [Auto bracketing] is enabled, [Continuous] will be set to [Single] and the flash mode will be disabled ( Economizer).

Noise reduction

When [Auto] of [Noise reduction] is applied with [Continuous] set to an option other than [Single] or [Intvl timer shooting], or with [Auto bracketing] set to an option other than [Off], noise reduction will not be performed. Selecting [On] for [Noise reduction] changes [Continuous] to [Single], when an option other than [Intvl timer shooting] is selected for [Continuous], and [Auto bracketing] to [Off].
Shooting Options: The Shooting Menu

**Converter**
Selecting [Wide-angle converter] or [Telephoto converter] for [Converter] changes the flash mode to "W".

**Distortion control**
When [Distortion control] is set to [On], [Continuous] is automatically set to [Single] and [Auto bracketing] is set to [Off].
Even when the [Distortion control] option is disabled, the [Continuous] and [Auto bracketing] settings do not change.

**Built-in flash, Speedlights (available separately from Nikon)**
Built-in flash and Speedlight SB-400, SB-600, or SB-800 flash unit (available separately from Nikon) operation is restricted, as shown below, depending upon the applied [Continuous] setting.

<table>
<thead>
<tr>
<th>Continuous mode</th>
<th>Built-in flash</th>
<th>Flash units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single</td>
<td>Available</td>
<td>Available</td>
</tr>
<tr>

<td>Not available</td>
</tr>
<tr>
<td>Multi-shot 16</td>
<td>Off</td>
<td>Available</td>
</tr>
<tr>
<td>Intvl timer shooting</td>
<td>Available</td>
<td>Available</td>
</tr>
</tbody>
</table>

When a flash unit (available separately from Nikon) is mounted on the camera’s accessory shoe, the built-in flash is automatically disabled.
Playback Options: The Playback Menu

The playback menu contains the following options.

- **D-Lighting**  
  Copy current picture with enhanced details in shadows.

- **Print set**  
  Select pictures to print and the number of copies for each.

- **Slide show**  
  View pictures stored in the internal memory or on a memory card in an automatic slide show.

- **Delete**  
  Delete all or selected pictures.

- **Protect**  
  Protect selected pictures from accidental deletion.

- **Hide image**  
  Hide selected pictures during playback.

- **Small pic.**  
  Create a small copy of the current picture.

- **Copy**  
  Copy files between memory card and internal memory.

- **Black border**  
  Create the new picture surrounding with black border.

**Displaying the Playback Menu**

Display the playback menu by pressing and pressing **MENU**.

- Use the multi selector to choose and apply settings (10).
- To exit the playback menu, press **MENU**.
Selecting Multiple Pictures
The picture selection screen, as shown at right, will be displayed with the following menus:

- **Playback menu**: print set (87), delete (118), protect (118), hide image (118), copy (119)
- **Setup menu**: welcome screen (122)

Follow the procedure described below to select multiple pictures.

1. Press the multi selector ◀ or ▶ to choose the desired picture.
   - The command dial can also be used in place of the multi selector.
   - Only one picture can be selected for [Welcome screen]. Proceed to step 3.
   - Rotate the zoom control to T ( Thumbnail to full-frame playback.
   - Rotate the zoom control to W ( Thumbnail to thumbnail display.

2. Press ▲ or ▼ to select [ON] or [OFF] (or the number of copies).
   - When [ON] is selected, a check mark (☑) is displayed in the top left corner of the current picture. Repeat steps 1 and 2 to select additional pictures.

3. Press OK.
   - The setting is enabled.
Slide Show

Play back pictures, stored in the internal memory or on a memory card, one by one in an automated “slide show.”

1. **Use the multi selector to choose [Start] and press OK.**
   To change the interval between pictures, choose [Frame intvl], select the desired interval time, and press OK before choosing [Start].
   To repeat the slide show automatically, enable [Loop] and press OK before choosing [Start]. The check mark (✔) will be added to the loop option when enabled.

2. **The slide show begins.**
   While the slide show is in progress, the following operations can be performed:
   - Press the multi selector ▶ to view pictures in the order recorded, or ◄ to view pictures in reverse order. Press and hold ▶ to fast forward, or ◄ to rewind.
   - Press OK to pause the slide show.

3. **Choose [End] or [Restart].**
   When the slide show ends or is paused, choose [End] and press OK to return to the playback menu, or choose [Restart] to play the slide show again.

**Notes on Slide Show**
- Only the first frame of movies (470) included in slide shows is displayed.
- Even if [Loop] is selected, the monitor will turn off automatically if no operations are performed for 30 minutes. The camera will turn off automatically if no operations are performed for another three minutes.
Delete selected pictures or all pictures.

**Erase selected images**
Delete selected pictures (116).

**Erase all images**
Delete all pictures.

**Notes on Deletion**
- Once deleted, pictures cannot be recovered. Transfer important images to a computer before deletion.
- Pictures marked with the icon are protected and cannot be deleted.

**Protect**
Protect selected pictures from accidental deletion (Selecting Multiple Pictures → 116).
Note, however, that formatting the camera’s internal memory or the memory card will permanently erase protected files (131).
Protected pictures are recognized by the icon in full-frame playback mode and the erase selected images screen, and by the icon in four-picture or nine-picture thumbnail playback mode.

**Hide Image**
Use this setting to hide pictures during playback.
See “Selecting Multiple Pictures” (116) for more information on using this function.
Hidden pictures cannot be deleted using the [Delete] option. Note, however, that formatting the internal memory or memory card (131) will delete hidden pictures.
Copy pictures between the internal memory and a memory card.

1 Use the multi selector to select an option from the copy screen and press (OK).
   - (IN): Copy pictures from internal memory to memory card.
   - (IN): Copy pictures from memory card to internal memory.

2 Select a copy option and press (OK).
   - Selected images: Copy pictures selected from the picture selection screen (116).
   - All images: Copy all pictures.

Notes on Copying Pictures
- JPEG-, AVI-, and WAV-format images can be copied. Images recorded in any other format cannot be copied.
- If voice memos (59) are attached to pictures selected for copying, voice memos are copied with the pictures. However, sound files recorded in voice recording mode (71) cannot be copied with this option. Sound files can be copied using the [Copy sound files] option (75) in audio playback mode.
- Pictures recorded with another make of camera or that have been modified on a computer cannot be copied.
- Edited copies have the same protection marking (118) as the original, but are not marked for printing (87).
- Hidden pictures (118) cannot be copied.

[Memory contains no images.] Message
If there are no pictures stored on the memory card when playback mode is applied, the message [Memory contains no images.] will be displayed. Press MENU to display the copy option screen, and copy the pictures stored in the camera's internal memory to the memory card.

More Information
See “Image/Sound File and Folder Names” (140) for more information.
**Basic Camera Setup: The Setup Menu**

The setup menu contains the following options.

<table>
<thead>
<tr>
<th>Menu</th>

<td>Display camera firmware version.</td>
<td>135</td>
</tr>
</tbody>
</table>
Displaying the Setup Menu
Rotate the mode dial to **SET UP**.

- Use the multi selector to choose and apply settings (110).
- To exit the setup menu, rotate the mode dial to another mode.

### Menus
Select a format for menu display.

**Text (default setting)**
Text labels for menus are displayed in list format.

**Icons**
All menu items can be displayed in a single page.
Welcome Screen
You can select the welcome screen to be displayed when the camera is turned on.

Disable welcome (default setting)
Welcome screen is not displayed.

COOLPIX
Displays a welcome screen.

Select an image
Select a picture in the internal memory or on the memory card for the welcome screen. Choose a picture in the picture selection screen (116) and press ok. As the selected image is stored in the camera, the image will appear in the welcome screen even if the original picture is deleted. Pictures shot at an [Image size] setting (92) of [3984x2656], [3968x2232], or [2992x2992], or copies created with [160x120] of the small picture function (57), cannot be selected.
**Date**

Set the camera clock and choose home and travel destination time zones.

**Date**

Set camera clock to current date and time. See steps 6 and 7 of the section, “Setting Display Language, Date and Time” (19), for more information.

**Time zone**

 manus (home time zone) can be specified and daylight saving enabled or disabled from [Time zone] options. When manus (destination time zone) is selected, the time difference (125) is automatically calculated and the date and time in the selected region are recorded. Useful when travelling.

**Setting Travel Destination Time Zone**

1. Use the multi selector to choose [Time zone] and press OK.
   The time zone menu is displayed.

2. Choose manus and press OK.
   The date and time displayed on the monitor changes according to the region currently selected.
   If daylight saving time is in effect, use the multi selector to choose [Daylight saving] and press OK, and then press the multi selector ▲. The time is automatically advanced one hour.
Basic Camera Setup: The Setup Menu

3  Press the multi selector ▶.
   The new city time zone menu is displayed.

4  Choose the travel destination time zone and press ☑.
   The setting is enabled.
   While the travel destination time zone is selected, the ▶ icon will be displayed in the monitor when the camera is in shooting mode.

The Clock Battery
The clock battery charges when the main battery is installed or the AC Adapter EH-62A (available separately from Nikon) is connected, and can provide several days of backup power after about ten hours of charging.

(Home Time Zone)
- To switch to the home time zone, choose  in step 2.
- To change the home time zone, choose  in step 2 and perform steps 3 and 4, to set the home time zone.

Daylight Saving Time
- If date and time are set when daylight saving time is not in effect: Turn [Daylight saving] on (☑) when daylight saving time begins, to automatically advance the camera’s clock one hour.
- If date and time are set with [Daylight saving] turned on (☑) when daylight saving time is in effect: Turn [Daylight saving] off when daylight saving time ends, to automatically set the camera’s clock back one hour.
### Time Zones (18)

The camera supports the time zones listed below. For time differences not listed below, set the camera clock to local time (18, 123).

<table>

</table>
Brightness
Choose from five settings for monitor brightness. The default setting is [3].

Date Imprint
Date and time of recording can be imprinted on pictures. This information can be printed even from printers that do not support printing of date and time (88).

- **Off (default setting)**
  - Date and time are not imprinted on pictures.

- **Date**
  - Date is imprinted on the bottom right corner of pictures shot while this option is in effect.

- **Date and time**
  - Date and time are imprinted on the bottom right corner of pictures shot while this option is in effect.

- **Date counter**
  - Time stamp shows number of days between date of recording and selected date.

At settings other than [Off], the icon for the current setting is displayed in the monitor (6).

Date Imprint
- Imprinted dates form a permanent part of image data and cannot be deleted.
- Dates imprinted at an image size setting (92) of (640 × 480) may be difficult to read. Choose (1,024 × 768) or larger when using date imprint.
- The date is recorded using the format selected in the setup menu’s [Date] item (18, 123).
- Date cannot be imprinted on pictures shot in certain modes (149).

Date Imprint and Print Set
When printing from DPOF-compatible printers which support printing of shooting date and photo information, the date and information can be printed on pictures without date and time imprinted on them, using options in the [Print set] menu (87).
Date Counter

Pictures shot while this option is in effect are imprinted with the number of days remaining until, or the number of days elapsed since a specified date. Use it to track the growth of a child or count down the days until a birthday or wedding.

Sample date counter time stamps are shown below.

Stored dates

Up to three dates can be stored. To set, choose an option, press the multi selector ▶️, enter a date ( Penguins, step 6), and press OK. To select a different date, choose an option and press OK.

Display options

Choose [Number of days], [Years and days], or [Yrs, mnths, days] and press OK.

Sample date counter time stamps are shown below.

Two days remaining  
Two days elapsed
Vibration Reduction

Vibration reduction effectively corrects blur, caused by slight hand movement known as camera shake, that commonly occurs when shooting with zoom applied or at slow shutter speeds. Vibration reduction can be used in all shooting modes. Vibration reduction is enabled in anti-shake mode (43) regardless of the option selected for [Vibration reduction].

<table>
<thead>
<tr>
<th>On (default setting)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vibration reduction is enabled when shooting still pictures and recording movies. Camera detects and factors out panning movements when reducing camera shake. When camera is panned horizontally, for example, vibration reduction reduces only vertical shake. If camera is panned vertically, vibration reduction affects only horizontal shake.</td>
</tr>
</tbody>
</table>

| Off |
| Vibration reduction is not enabled. |

When vibration reduction is enabled, the current setting is displayed in the monitor during shooting (when [Off] is selected, an icon for the current setting is not displayed in the monitor) (6).

Notes on Vibration Reduction

- Vibration reduction may take a few seconds to activate after the power is turned on, or the camera enters shooting mode from playback mode. Wait until the display stabilizes before shooting.
- Due to characteristics of the vibration reduction function, images displayed in the camera’s monitor immediately after shooting may appear blurry.
- Turn vibration reduction off when using a tripod to stabilize the camera during shooting.
- Vibration reduction may be unable to completely eliminate the effects of camera shake in some situations.
- [VR] stands for vibration reduction.
**AF Assist**

Enable or disable AF-assist illumination.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto (default setting)</td>
<td>AF-assist illumination will be used to assist the focus operation when the subject is poorly lit. Note that for some scene modes, AF-assist illumination turns off automatically.</td>
</tr>
<tr>
<td>Off</td>
<td>Disable this function. The camera may be unable to focus if lighting is poor.</td>
</tr>
</tbody>
</table>

**Digital Zoom**

Use this setting to control digital zoom operation.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>On (default setting)</td>
<td>Rotating and holding the zoom control at T (Q), at the maximum optical zoom position, triggers digital zoom (25).</td>
</tr>
<tr>
<td>Crop</td>
<td>Limit digital zoom to the range at which image quality does not suffer.</td>
</tr>
<tr>
<td>Off</td>
<td>Disable digital zoom except when recording movies.</td>
</tr>
</tbody>
</table>

**Notes on Digital Zoom**

- When digital zoom is in effect, [AF area mode] is set to [Center] (105).
- Digital zoom is not available in the following situations.
  - When [Portrait] or [Night portrait] is selected in scene mode
  - When [Multi-shot 16] is selected for [Continuous] (101)
  - When [Converter] (110) is set to [Wide-angle converter]
  - Before movie recording begins (however, digital zoom of up to 2× can be applied while movies, other than stop-motion movies, are being recorded)
- At magnifications of 1.2× to 1.8×, [Metering] is set to [Center-weighted], and at magnifications of 2.0× to 4.0×, [Metering] is set to [Spot].
Sound Settings
Adjust the following sound settings.

**Button sound**
Turn button sound on or off. When [On] (default setting) is selected, a beep will sound once when operations are completed successfully, twice when the camera acquires focus on the subject, and three times when an error is detected. Start-up sound will also play when the camera is turned on.

**Shutter sound**
Choose shutter sound from [On] (default setting) or [Off].

Auto Off
If no operations are performed for the selected length of time, the monitor will turn off and the camera will enter standby mode (23) to reduce the drain on the battery. The power-on lamp will blink in standby mode. If no operations are performed for about another three minutes, the camera will turn off automatically. Choose the time allowed to elapse before the camera enters standby mode. The time options are [30s], [1m] (default setting), [5m], and [30m].

Notes on Auto Off
Regardless of the option selected, the monitor will remain on for three minutes when menus are displayed, or for 30 minutes during continuous playback for slide shows or when the AC Adapter EH-62A (available separately from Nikon) is connected.
Format Memory/Format Card
Use this option to format the internal memory or a memory card.

Formatting the Internal Memory
To format the internal memory, remove the memory card from the camera. The [Format memory] option appears in the setup menu.

Formatting a Memory Card
When the memory card is inserted in the camera, the [Format card] option appears in the setup menu.

Formatting Internal Memory and Memory Cards
- Formatting the internal memory or memory cards permanently deletes all data. Be sure to transfer important pictures to a computer before formatting.
- Do not turn the camera off, disconnect the AC adapter, or open the battery-chamber/memory card slot cover during formatting.
- The first time you insert the memory cards used in other devices into the COOLPIX P5100, format them with this camera.
### Language
Choose one of 23 languages for display of camera menus and messages.

</tr>
<tr>
<td></td>
<td>High-speed, 20-MB/s cards: 1 GB, 2 GB(^1)</td>
</tr>
<tr>
<td>Toshiba</td>
<td>128 MB, 256 MB, 512 MB, 1 GB, 2 GB(^1), 4 GB(^1,2)</td>
</tr>
<tr>
<td></td>
<td>High-speed, 10-MB/s cards: 256 MB, 512 MB, 1 GB</td>
</tr>
<tr>
<td></td>
<td>High-speed, 20-MB/s cards: 512 MB, 1 GB, 2 GB(^1)</td>
</tr>
<tr>
<td>Panasonic</td>
<td>128 MB, 256 MB, 512 MB, 1 GB, 2 GB(^1), 4 GB(^1,2)</td>
</tr>
<tr>
<td></td>
<td>High-speed, 10-MB/s cards: 4 GB(^1,2)</td>
</tr>
<tr>
<td></td>
<td>High-speed, 20-MB/s cards: 512 MB, 1 GB, 2 GB(^1), 4 GB(^1,2)</td>
</tr>
</tbody>
</table>

\(^1\) If the memory card will be used with a card reader or similar device, the device must support memory card specifications.

\(^2\) SDHC-compliant.

Other cards have not been tested. For more details on the memory cards listed above, please contact the manufacturer.
Attaching Converter Lenses

Attach the Wide-angle Converter WC-E67 and Telephoto Converter TC-E3ED (available separately from Nikon) as described below (the illustrations show the WC-E67). See the converter instruction manual for details.

1. **Remove the lens ring.**
   Turn the camera off and remove the lens ring as shown at right.

2. **Remove the rear cap from the converter lens.**

3. **Attach the Step-down Ring Adapter UR-E20 and the converter (available separately from Nikon).**
   Attach the Step-down Ring Adapter UR-E20 to the camera lens 1. Then screw the converter lens into the Step-down Ring Adapter UR-E20 2.

4. **Choose a [Converter] option.**
   Rotate the mode dial to P (Programmed Auto), S (Shutter-Priority Auto), A (Aperture-Priority Auto), M (Manual), or B (High sensitivity) and select the appropriate converter type for the [Converter] option in the camera shooting menu (110).

5. **Remove the lens cap.**
   Remove the front cap from the converter lens.

Rotate the mode dial to P, S, A, M, or B when using converter lenses (available separately from Nikon). To remove the converter, turn the camera off and perform steps 1 to 4 in reverse order. Set the [Converter] option in the camera shooting menu (110) to [None] when no converter is attached.
Using Optional Speedlights

The camera is equipped with an accessory shoe with a safety lock, allowing Speedlights SB-400, SB-600, and SB-800 (available separately from Nikon) to be mounted directly on the camera without a sync cable. Use Speedlights for indirect lighting or when additional lighting is required. The built-in flash turns off automatically when using Speedlights. While  is displayed in the monitor, Speedlights flash mode is also displayed in the monitor, and it can be set with the same procedure as the built-in flash (30).

- Remove the accessory shoe cover before attaching a Speedlight. Slide the accessory shoe cover to the direction of an arrow to remove it.
- Refer to the Speedlight manual for more information on how to attach Speedlight and details.
- Replace the accessory shoe cover when the Speedlight is not in use.

Speedlights SB-400, SB-600, and SB-800

- Speedlights SB-400, SB-600, and SB-800 are equipped with a safety lock so that it prevents Speedlight from coming off easily.
- When set to STBY (stand-by), the Speedlight will power on and off at the same time as the camera. Confirm the Ready-light is on with Speedlight unit.
- Before using Speedlights SB-600 or SB-800, set the Speedlight flash control mode to TTL for i-TTL flash control, which uses monitor pre-flashes to adjust flash output automatically in response to lighting conditions. Refer to the Speedlight manual for more information on i-TTL flash control.
- The camera does not support Advanced Wireless Lighting, Flash Color Information Communication, Auto FP High-Speed Sync, FV lock, or AF-assist for multi-area AF when using Speedlights SB-600 or SB-800.
- Power zoom can be used with Speedlights SB-600 and SB-800, setting illuminating angle automatically depending upon focal length.
- When using Speedlights SB-600 or SB-800, a wide panel may be needed to illuminate the edges of the picture at ranges under 2 m (6 ft. 7 in.) when the camera is zoomed out.
Technical Notes

Image/Sound File and Folder Names

Pictures, movies, voice memos and voice recordings are assigned file names as follows.

<table>
<thead>
<tr>
<th>Identifier (not shown on camera monitor)</th>
<th>DSCN0001.JPG</th>
<th>Extension (signifies the file type)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original still pictures (voice memo attachment included), movies, voice recordings</td>
<td>DSCN</td>
<td>Still pictures .JPG</td>
</tr>
<tr>
<td>Cropped copies (voice memo attachment included)</td>
<td>RSCN</td>
<td>Movies .AVI</td>
</tr>
<tr>
<td>Small copies (voice memo attachment included)</td>
<td>SSCN</td>
<td>Voice memos .WAV</td>
</tr>
<tr>
<td>D-Lighting or black border copies (voice memo attachment included)</td>
<td>FSCN</td>
<td>Voice recordings</td>
</tr>
<tr>
<td>Time-lapse movies</td>
<td>INTN</td>
<td></td>
</tr>
</tbody>
</table>

- Files are stored in folders named with a folder number followed by a five-character identifier: “P_“ plus a three-digit sequence number for pictures shot using panorama assist (e.g. “101P_001”; 41), “INTVL” for interval timer photography (e.g. “101INTVL”; 103), “SOUND” for voice recordings (e.g. “101SOUND”; 71), and “NIKON” for all other pictures (e.g. “100NIKON”). When the number of files within a folder reaches 9999, a new folder will be created. File numbers will be assigned automatically starting with “0001.”

- Files copied using [Copy] > [Selected images] or [Copy sound files] > [Selected files] are copied to the current folder, where they are assigned new file numbers in ascending order starting from the largest file number in memory. [Copy] > [All images] and [Copy sound files] > [Copy all files] copy all folders from the source medium; file names do not change but new folder numbers are assigned in ascending order, starting from the largest folder number on the destination medium (75, 119).

- A single folder can hold up to 200 pictures; if the current folder already contains 200 pictures, a new folder, named by adding one to the current folder name, will be created the next time a picture is shot. If the current folder is numbered 999 and contains 200 pictures, or a picture is numbered 9999, no further pictures can be shot until the internal memory or memory card is formatted (131), or a new memory card is inserted.
Caring for the Camera

To ensure continued enjoyment of this Nikon product, observe the following precautions when using or storing the device:

✔ Keep Dry
The device will be damaged if immersed in water or subjected to high humidity.

✔ Do Not Drop
The product may malfunction if subjected to strong shock or vibration.

✔ Handle the Lens and all Moving Parts with Care
Do not apply force to the lens, lens cover, monitor, memory card slot or battery chamber. These parts are easily damaged. Applying force to the lens cover could result in camera malfunction or damage to the lens. Should the monitor break, care should be taken to avoid injury caused by broken glass and to prevent the liquid crystal from the display touching the skin or entering the eyes or mouth.

✔ Do Not Point the Lens at Strong Light Sources for Extended Periods
Avoid pointing the lens at the sun or other strong light sources for extended periods when using or storing the camera. Intense light may cause deterioration of the CCD image sensor, producing a white blur effect in photographs.

✔ Keep Away from Strong Magnetic Fields
Do not use or store this device in the vicinity of equipment that generates strong electromagnetic radiation or magnetic fields. Strong static charges or the magnetic fields produced by equipment such as radio transmitters could interfere with the monitor, damage data stored on the memory card, or affect the product’s internal circuitry.

✔ Avoid Sudden Changes in Temperature
Sudden changes in temperature, such as when entering or leaving a heated building on a cold day, can cause condensation to form inside the device. To prevent condensation, place the device in a carrying case or a plastic bag before exposing it to sudden changes in temperature.

✔ Turn the Product Off Before Removing or Disconnecting the Power Source
Do not remove the battery while the product is on, or while images are being recorded or deleted. Forcibly cutting power in these circumstances could result in loss of data or in damage to product memory or internal circuitry.
Caring for the Camera

The Self-timer Lamp/AF-assist Illuminator LED

The light-emitting diode (LED; 4, 32, 129) used in the self-timer lamp/AF-assist illuminator conforms to the following IEC standard:

![CLASS 1 LED PRODUCT]

IEC60825-1 Edition 1.2 2001

The Battery

- Check the battery level when taking the camera out, and charge the battery if necessary (14). Do not continue charging once the battery is fully charged, as this will result in reduced battery performance. If possible, carry a fully-charged spare battery when shooting pictures on important occasions.
- Do not use the battery at ambient temperatures below 0 °C (32 °F) or above 40 °C (104 °F). During charging, the temperature should be in the vicinity of 5 to 35 °C (41 to 95 °F). Note that the battery may become hot during use; wait for the battery to cool before charging. Failure to observe these precautions could damage the battery, impair its performance or prevent it from charging normally.
- On cold days, the capacity of batteries tends to decrease. Be sure that the battery is fully charged before heading outside to shoot in cold weather. Keep spare batteries in a warm place and exchange as necessary. Once warmed, a cold battery may recover some of its charge.
- Dirt on the battery terminals can prevent the camera from functioning.
- When the battery is not in use, remove it from the camera or battery charger and replace the terminal cover. The camera and battery charger draw minute amounts of current even when off; if left in place, the battery could be drained to the point that it no longer functions. Turning the camera on or off while the battery is exhausted can result in reduced battery life. If the battery will not be used for an extended period, store it in a cool (15 to 25 °C / 59 to 77 °F), dry place. Recharge it at least once a year and run it flat before returning it to storage.
- Replace the battery when it no longer holds a charge. Used batteries are a valuable resource. Please recycle used batteries in accordance with local regulations.
### Cleaning

<table>
<thead>
<tr>
<th>Component</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lens/viewfinder</td>
<td>Avoid touching glass parts with your fingers. Remove dust or lint with a blower (typically a small device with a rubber bulb attached to one end that is pumped to produce a stream of air out the other end). To remove fingerprints or other stains that cannot be removed with a blower, wipe the lens with a soft cloth, using a spiral motion that starts at the center of the lens and working toward the edges. If this fails, clean the lens using a cloth lightly dampened with commercial lens cleaner.</td>
</tr>
<tr>
<td>Monitor</td>
<td>Remove dust or lint with a blower. To remove fingerprints and other stains, clean the monitor with a soft, dry cloth, being careful not to apply pressure.</td>
</tr>
<tr>
<td>Body</td>
<td>Use a blower to remove dust, dirt or sand, then wipe gently with a soft, dry cloth. After using the camera at the beach or seaside, wipe off any sand or salt with a dry cloth lightly dampened with fresh water, then dry thoroughly. Note that foreign matter inside the camera could cause damage not covered by the warranty.</td>
</tr>
</tbody>
</table>

Do not use alcohol, thinner, or other volatile chemicals.

### Storage

Turn the camera off when not in use. Check that the power-on lamp is off before putting the camera away. Remove the battery if the camera will not be used for an extended period. Do not store the camera with naptha or camphor moth balls, or in any of the following locations:

- Next to equipment that produces strong electromagnetic fields, such as televisions or radios
- Exposed to temperatures below −10 °C (14 °F) or above 50 °C (122 °F)
- Poorly ventilated or subject to humidities of over 60%

To prevent mold or mildew, take the camera out of storage at least once a month. Turn the camera on and release the shutter a few times before putting the camera away again.

### Use Only Nikon Flash Accessories

Use only Nikon Speedlights. Negative voltages or voltages over 250 V applied to the accessory shoe could not only prevent normal operation, but damage the sync circuitry of the camera or flash. Before using a Nikon Speedlight not listed in this section, contact a Nikon-authorized service representative for more information.

### Notes on the Monitor

- The monitor may contain a few pixels that are always lit or that do not light. This is a characteristic common to all TFT LCD displays, and does not indicate a malfunction. Images recorded using the product will not be affected.
- When framing bright subjects, vertical comet-like streaks that whiten toward either end may appear in the display. This phenomenon, known as “smear,” does not appear in the final photograph and does not indicate a malfunction. Some smear may appear in movies.
- Images in the monitor may be difficult to see under bright lighting.
- The monitor is lit by an LED backlight. Should the monitor begin to dim or flicker, contact your Nikon-authorized service representative.
## Error Messages

The following table lists the error messages and other warnings displayed in the monitor, as well as the solutions for dealing with them.

* See the documentation provided with your printer for further guidance and information.
If the camera fails to function as expected, check the list of common problems below before consulting your retailer or Nikon-authorized service representative. Refer to the page numbers in the right-most column for more information.

**Display, Settings and Power Supply**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause/Solution</th>
<th>Page Numbers</th>
</tr>
</thead>
</table>
| Monitor is blank. | • Camera is off.  
• Battery is exhausted.  
• Standby mode for saving power: press the shutter-release button halfway.  
• Monitor is off: press [\(\text{\textbf{[}}\text{\textbf{]}}\).  
• When flash lamp blinks red, wait until flash has charged.  
• Camera and computer are connected via USB cable.  
• Camera and TV are connected via audio/video cable.  
• Time lapse or interval timer photography in progress. | 22, 23, 26 |
| Monitor is hard to read. | • Ambient lighting too bright: use viewfinder or move to darker location.  
• Adjust monitor brightness.  
• Monitor is dirty. Clean monitor.  
• Monitor has dimmed to save power. Monitor brightens when controls are used. | 24, 126, 143 |
| Camera turns off without warning. | • Battery is low.  
• Camera has turned off automatically to save power.  
• Battery is cold. | 22, 23, 142 |
| Date and time of recording are not correct. | • Pictures recorded before clock was set, and “Date not set” indicator blinks during shooting, will have time stamp of “00/00/0000 00:00”; movies and voice recordings will be dated “01/09/2007 00:00.”  
• Check camera clock regularly against more accurate timepieces and reset as required. | 18, 123 |
| No indicators displayed in monitor. | Shooting data and photo information may be hidden. Press [\(\text{\textbf{[}}\text{\textbf{]}}\) until shooting data or photo information will be displayed. | 12 |
| [Date imprint] not available. | Camera clock has not been set. | 18, 123 |
In extremely rare instances, unusual characters may appear in the monitor and the camera may stop functioning. In most cases, this phenomenon is caused by a strong external static charge. Turn the camera off, remove and replace the battery, then turn the camera on again. In the event of continued malfunction, contact your retailer or Nikon-authorized service representative. Note that disconnecting the power source as described above may result in the loss of any data not recorded to internal memory or the memory card at the time the problem occurred. Data already recorded will not be affected.

</tr>
</thead>
</table>
| Pictures are blurred. | • Use flash.  
• Use anti-shake mode.  
• Use high-sensitivity shooting mode.  
• Use vibration reduction.  
• Use BSS.  
• Use tripod and self-timer.  
• The [Converter] setting does not match the converter lens mounted on the camera. Be sure to check the [Converter] setting before shooting. | 30, 43, 44, 128, 101, 32, 110 |
| Bright specks appear in pictures shot with flash. | Flash is reflecting off particles in air. Turn flash off. | 30 |
| Built-in flash does not fire. | • Flash is off.  
• Some scene modes that cannot turn on flash are selected.  
• of focus mode is applied.  
• Anti-shake mode is applied.  
• modes other than [Time-lapse movie] is selected.  
• [Continuous], [BSS], or [Multi-shot] is selected for [Continuous].  
• Option other than [Off] is selected for [Auto bracketing] in shooting menu.  
• Option other than [None] is selected for [Converter] in shooting menu.  
• [Built-in off] is selected for [Flash control] in shooting menu.  
• Speedlight (available separately from Nikon) is used. | 30, 35, 33, 43, 64, 101, 104, 110, 108, 139 |
| Optical zoom cannot be used. | Optical zoom cannot be used while recording movies. | 64 |
| Digital zoom cannot be used. | Digital zoom is not available when shooting in the [Portrait] scene mode or [Night portrait] scene mode, before movie recording begins, when [Continuous] is set to [Multi-shot 16], or when [Digital zoom] in the setup menu is set to [Off]. | 36, 37, 64, 101, 129 |
| [Image size] not available. | • [Image size] cannot be adjusted when [Multi-shot 16] is selected for [Continuous].  
• When [ISO sensitivity] is set to [3200], [4000×3000], [3264×2448], [3984×2656], [3968×2232], or [2992×2992] cannot be selected for [Image size]. | 101, 99 |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause/Solution</th>
</tr>
</thead>
</table>
| No sound when shutter is released. | - [Off] is selected for [Sound settings] > [Shutter sound] in setup menu.  
- [Continuous], [BSS], [Continuous flash], or [Multi-shot 16] is selected for [Continuous] in shooting menu.  
- Option other than [Off] is selected for [Auto bracketing] in shooting menu.  
- ([Sports] scene mode) or ([Museum] scene mode) is selected.  
- Anti-shake mode or [ ] mode is selected. |
| AF-assist illuminator does not light. | - [Off] is selected for AF assist option in camera setup menu.  
- AF-assist illuminator turns off automatically in some modes. |
| Pictures appear smeared. | Lens is dirty. Clean lens. |
| Colors are unnatural. | White balance setting is not appropriate for light source. |
| Randomly spaced bright pixels (“noise”) appear in image. | Shutter speed too slow. Noise can be reduced by:  
* Using flash  
* Specifying a lower ISO sensitivity setting  
* Applying [Noise reduction] in the shooting menu to suit situations.  
* Choosing scene mode with noise reduction |
| Pictures are too dark (underexposed). | - Flash is off.  
- Flash window is blocked.  
- Subject is beyond flash range.  
- Adjust exposure compensation.  
- Apply high-sensitivity shooting mode, or raise the ISO sensitivity.  
- Subject is backlit. Select ([Backlight] scene mode) or use fill flash. |
| Pictures are too bright (overexposed). | Adjust exposure compensation. |
| Unexpected results when flash set to ([ ]) (auto with red-eye reduction). | When ([ ]) or "fill flash with slow sync and red-eye reduction" of the [Night portrait] scene mode is applied during shooting, In-Camera Red-Eye Fix may, in very rare cases, be applied to areas not affected by red-eye. Set a flash mode other than ([ ]) when in a shooting mode other than the [Night portrait] scene mode during shooting. |

Supported Standards

- **DCF**: Design Rule for Camera File System is a standard widely used in the digital camera industry to ensure compatibility among different makes of camera.
- **DPOF**: Digital Print Order Format is an industry-wide standard that allows pictures to be printed from print orders stored on the memory card.
- **Exif version 2.2**: This camera supports Exif (Exchangeable Image File Format for Digital Still Cameras) version 2.2, a standard that allows information stored with photographs to be used for optimal color reproduction when images are output from Exif-compliant printers.
- **PictBridge**: A standard developed cooperatively by the digital camera and printer industries, allowing photographs to be output directly to a printer without connecting the camera to a computer.
